JUDGEMENT

According to Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food in its currently valid version we declare as regards maximum levels for perfluoroalkyl substances in eggs:

PFOS (expressed as Perfluorooctane sulphonic acid (PFOS)) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.0 µg/kg wet weight.

PFOA (expressed as Perfluorooctanoic acid (PFOA)) is below the maximum level of 0.30 µg/kg wet weight.

PFNA (expressed as Perfluorononanoic acid (PFNA)) is below the maximum level of 0.70 µg/kg wet weight.

PFHxS (expressed as Perfluorhexanesulfonic acid (PFHxS)) is below the maximum level of 0.30 µg/kg wet weight.

The sum of PFOS, PFOA, PFNA and PFHxS (expressed as Sum PFOS / PFOA / PFNA / PFHxS exkl. LOQ) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.7 µg/kg wet weight.

JUDGEMENT

According to Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food in its currently valid version we declare as regards maximum levels for perfluoroalkyl substances in eggs:

PFOS (expressed as Perfluorooctane sulphonic acid (PFOS)) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.0 µg/kg wet weight.

PFOA (expressed as Perfluorooctanoic acid (PFOA)) is below the maximum level of 0.30 µg/kg wet weight.

PFNA (expressed as Perfluorononanoic acid (PFNA)) is below the maximum level of 0.70 µg/kg wet weight.

PFHxS (expressed as Perfluorhexanesulfonic acid (PFHxS)) is below the maximum level of 0.30 µg/kg wet weight.

The sum of PFOS, PFOA, PFNA and PFHxS (expressed as Sum PFOS / PFOA / PFNA / PFHxS exkl. LOQ) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.7 µg/kg wet weight.

Please note that this result has been verified by an additional analysis.

JUDGEMENT

According to Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food in its currently valid version we declare as regards maximum levels for perfluoroalkyl substances in eggs:

PFOS (expressed as Perfluorooctane sulphonic acid (PFOS)) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.0 µg/kg wet weight.

PFOA (expressed as Perfluorooctanoic acid (PFOA)) is below the maximum level of 0.30 µg/kg wet weight.

PFNA (expressed as Perfluorononanoic acid (PFNA)) is below the maximum level of 0.70 µg/kg wet weight.

PFHxS (expressed as Perfluorhexanesulfonic acid (PFHxS)) is below the maximum level of 0.30 µg/kg wet weight.

The sum of PFOS, PFOA, PFNA and PFHxS (expressed as Sum PFOS / PFOA / PFNA / PFHxS exkl. LOQ) is **- also when taking a measurement uncertainty of 25% into account - above** the maximum level of 1.7 µg/kg wet weight.

Please note that this result has been verified by an additional analysis.

5. RESULTATEN

5.1 OPPERVLAKTEWATER

Er werd op 12 locaties een staal genomen van het oppervlaktewater. De locaties zijn aangeduid op onderstaande luchtfoto's.

Voor PFOS, PFOA en EtFOSAA⁵ worden de resultaten in onderstaande overzichtstabel 5.1. weergegeven; voor de overige parameters wordt verwezen naar het analyserapport opgenomen in bijlage 8.1.1.

(*) in ieder staal zijn ook enkele andere PFAS boven detectielimiet, maar niet sterker verhoogd dan PFOS of PFOA

⁵ De parameter EtFOSAA werd vastgesteld in verhoogde concentraties in de zone van de voormalige site De Naeyer in meerdere bodemstalen. Om deze reden wordt in de overzichten van de resultaten deze parameter telkens mee opgenomen.

5.2.5 Woonzone – Zone K

In onderstaande figuur 6 zijn de staalnamelocaties genomen in zone K aangegeven.

Figuur 6 – Zone K

Voor PFOS, PFOA en EtFOSAA worden de resultaten in onderstaande overzichtstabel 5.6. weergegeven; voor de overige parameters wordt verwezen naar het analyserapport opgenomen in bijlage 8.1.2 en de toetsingstabellen opgenomen in bijlage 8.2.1.

- Zone K is cf. het gewestplan gelegen in woongebied of woonuitbreidingsgebied.

(*) boring BK21001 is gelegen in een bufferzone (overig groen): Voor een grond die in een bufferzone gelegen is, worden de bodemsaneringsnormen bepaald op basis van de bodemsaneringsnormen van de gronden die aan de bufferzone grenzen (in voorliggend geval dus woongebied)

- Er worden geen concentraties aan PFOS, PFOA of andere parameters vastgesteld boven 80 % BSN type III.

5.2.8 Zwarte beek, Arkenbosloop – Zone Z

In onderstaande figuur 9 zijn de staalnamelocaties genomen in zone F (onverharde wandelpaden nabij Zwarte beek, Arkenbosloop en Fabriekloop) aangegeven.

Figuur 9 – Staalnamelocaties zone Z

Voor PFOS, PFOA en EtFOSAA worden de resultaten in onderstaande overzichtstabel 5.9. weergegeven; voor de overige parameters wordt verwezen naar het analyserapport opgenomen in bijlage 8.1.2 en de toetsingstabellen opgenomen in bijlage 8.2.1.

- Zone F ligt cf. het gewestplan in meerdere bestemmingstypes.
- Ter hoogte van alle boringen worden verhoogde concentraties aan PFOS (en PFOA) vastgesteld. Er is hierbij sprake van sterke overschrijdingen van de BSN voor woongebied (BSN III) en recreatie (BSN IV).
- De verontreiniging wordt vastgesteld in zowel in de toplaag (0-0,15 m-mv) als in de

onderliggende laag (0,15-0,30 m-mv). Ook is sprake van de aanwezigheid van precursoren voor PFOS, bv EtFOSAA (indicatieve bepaling).

- **Bijkomend onderzoek is noodzakelijk in functie van afperking en gedetailleerde risico-evaluatie.**

6. EVALUATIE EN VERDER ONDERZOEK

De resultaten van het bijkomend verkennend onderzoek werden teruggekoppeld met OVAM en AZG en hebben geleid tot het verder implementeren en specificeren van de reeds genomen no-regretmaatregelen (of voorzorgsmaatregelen) binnen een afgebakende zone.

Op basis van de resultaten werden de voorzorgsmaatregelen en werd de zone van de voorzorgsmaatregelen bijgesteld. Hierover werd opnieuw gecommuniceerd dd. 19 juli 2021 door de bevoegde instanties. De resultaten van het bijkomend verkennend onderzoek dienen geïnterpreteerd te worden in combinatie met de geadviseerde voorzorgsmaatregelen ten einde risico's ten gevolge van blootstelling aan de verontreiniging te vermijden.

Binnen de zone van de voorzorgsmaatregelen is **bijkomend onderzoek noodzakelijk in functie van de afperking, in functie van een gedetailleerde risico-evaluatie en in functie van het bepalen van de saneringsnoodzaak**. Dit bijkomend onderzoek zal afhankelijk van de locatie gericht zijn op 1 of meerdere media (grond, grondwater, oppervlaktewater, gewassen,...)

3. BEMONSTERING EN ANALYSES

3.1. Monsternamenpunten bodem

De staalname werd uitgevoerd op 28 juli 2021 door [REDACTED] (Bodemkundige Dienst van België). De bemonstering gebeurde representatief voor de verkenning van de milieuhygiënische kwaliteit van de uit te graven bodem. De monsternamenpunten B1 t.e.m. B6 zijn aangeduid op het zoneringsplan.

Boorpunten	X-coördinaat (Lambert 1972, m)	Y-coördinaat (Lambert 1972, m)	Diepte (m-mv)	Asbestverdacht materiaal?

B6	150421	194081	2.50	neen
Totaal aantal boormeters:			11.00	

De boringen in het vaste deel van de aarde zijn handmatig uitgevoerd met behulp van een Edelmanboor (diameter 70 mm). Het bodemmateriaal dat toen werd opgeboord, is ter plaatse gebleven.

Asbestrisico: In de boringen werd geen asbestverdacht materiaal aangetroffen.

Woekerende uitheemse soorten (www.ecopedia.be): Tijdens het veldwerk werden geen invasieve plantensoorten aangetroffen in of op de bodem.

5. BESLUIT

5.1. Indeling van de uit te graven of uitgegraven bodemmateriële

Er wordt 1 milieuhygiënische kwaliteit vastgesteld¹:

Zone	Deel-partij	Diepte (m-mv)	Code	Volume (m ³)	Hergebruik mogelijk in:	Rand-voorwaarde
Zone 1 wegeniswerken	1.1	0 – 2.50 m-mv	211	2800	KWZ	-

Zie ook opmetingstabel in bijlage F.

¹ De berekening van de volumes en de bepaling van de dieptes zijn gebeurd op basis van de aangeleverde gegevens (e-mail van Tom Guedin op 3 maart 2021). Zie ook ontwerpplan en grondverzetstabel in bijlage I.

Dit technisch verslag heeft enkel betrekking tot de milieuhygiënische kwaliteit voor bouwkundig bodemgebruik of gebruik in een vormvast product en doet geen uitspraak over de bouwtechnische kwaliteit.

5.2. Bijkomende voorwaarden

BODEMSAMENSTELLING

Hergerbruik van de gronden die enkel stenen van natuurlijke oorsprong bevatten houdt geen bijkomende voorwaarden in. Voor de gronden die daarnaast ook bodemvreemde stenen, steenachtig bodemvreemd materiaal en niet-steenachtig bodemvreemd materiaal bevatten, dient gelet te worden op de beperkingen voor de maximale hoeveelheid aangetroffen niet-natuurlijke stenen (A) en verplichtingen met betrekking tot de noodzaak tot zeven met het oog op hergerbruik (B).

- **Beperkingen voor de maximale hoeveelheid aangetroffen niet-natuurlijke stenen**
- Partijen grond met **minder dan 25%** bodemvreemde stenen of bodemvreemd materiaal worden beschouwd als bodem en zijn, met uitzondering van te saneren grond, geen afvalstof. De noodzaak tot zeven van deze bodem is afhankelijk van het beoogde hergerbruik en de bodemsamenstelling (zie punt B)
- Gronden met **meer dan 25% maar minder dan 75%** bodemvreemde stenen of bodemvreemd materiaal worden beschouwd als een gemengde afvalstroom. De grondfractie kan als bodem beschouwd worden indien wordt afgezeefd tot minder dan 25% bodemvreemde stenen of bodemvreemd materiaal. Het zeefresidu (=stenen) dient behandeld te worden conform de VLAREMA-regelgeving.
- Grond met **meer dan 75%** bodemvreemde stenen of bodemvreemd materiaal wordt beschouwd als een afvalstof en dient conform de VLAREMA-regelgeving behandeld te worden. Over deze volumes wordt in dit technisch verslag geen uitspraak gedaan.

1. INLEIDING

Sertius nv voerde een verkennend bodemonderzoek uit op de terreinen van de voormalige papierfabriek De Naeyer en omgeving in Willebroek. Het rapport heeft als titel 'Samenvattend overzicht bijkomend verkennend bodemonderzoek PFAS, Willebroek, Projectnummer SOL18110275' en dateert van 19 juli 2021.

Dit bodemonderzoek stelde een bodemverontreiniging vast op het voormalige fabrieksterrein, maar ook in de omgeving. De bodemverontreiniging diende verder onderzocht en afgeperkt worden. Het fabrieksterrein en de omgeving werden in functie van het verder onderzoek opgesplitst in zones. Het gedeelte van het fabrieksterrein dat herontwikkeld wordt tot woonzone is 'zone F'. De overige woonzones, waar ook mogelijk een bodemverontreiniging voorkomt, zijn 'zone H' – ██████████ 'zone K' – ██████████ en 'zone O' – ██████████. Een integrale aanpak voor deze percelen is aangewezen, gelet op de vastgestelde bodemverontreiniging in de verschillende zones.

Op voorstel van OVAM werden de betreffende gronden gelegen in Willebroek als site 'Voormalige papierfabriek en omgeving in Willebroek' vastgesteld (sitebesluit dd 09/08/2021, B.S. 17/08/2021).

De uitvoering van een siteonderzoek voor de verschillende woonzones is momenteel in uitvoering.

Sertius nv voerde een verkennend waterbodemonderzoek uit ter hoogte van de Fabriekloop, de Zwarte Beek, de Arkenbosloop en de oppervlaktewateren nabij en binnen het natuurgebied van het Broek De Naeyer en omgeving in Willebroek. Het rapport heeft als titel 'Verkennend waterbodemonderzoek, Fabriekloop, Willebroek, Projectnummer SOL18110275' en dateert van 17 juni 2021 met aanvulling 07 januari 2022.

Rekening houdend met de resultaten van dit verkennend waterbodemonderzoek werden de waterbodems van de Fabriekloop, de Zwarte Beek, de Arkenbosloop en de oppervlaktewateren nabij en binnen het natuurgebied van het Broek De Naeyer in Willebroek bij besluit van de Vlaamse Regering (26/11/2021) aangewezen als waterbodems waar de beheerders een waterbodemonderzoek moeten uitvoeren (nog op te starten).

In voorliggend rapport wordt nagegaan welke informatie beschikbaar is omtrent de historiek van de voormalige papierfabriek De Naeyer en omgeving en wordt deze gebundeld. Deze informatie kan van belang zijn voor de (ruimere) interpretatie van de resultaten van het siteonderzoek (in uitvoering) en het waterbodemonderzoek (nog op te starten).

3. KADASTRALE INDELING

Voor de huidige kadastrale indeling van de voormalige papierfabriek De Naeyer en omgeving wordt verwezen naar de digitaal consulteerbare informatie via CadGIS viewer.

Over de jaren heen is de kadastrale indeling veelvuldig gewijzigd. De kadastrale indeling op de plannen die overgenomen zijn uit de vermelde documenten en bronnen kan dus afwijken van de huidige kadastrale indeling. Het in detail nagaan van kadastrale wijzigingen en mutaties over de jaren heen maakt geen deel uit van voorliggend rapport.

4. HISTORIEK

4.1 Inleiding

De voormalige papier- en ketelfabriek werd in 1860 opgericht door Louis De Naeyer [REDACTED]. De aanvankelijk opgericht fabriek (sinds 1863 in volle werking) voor de productie van papierstof werd zeer snel uitgebreid met afdelingen voor het vervaardigen van papier (1874) en het bouwen van stoomketels (1876).

De keuze voor de locatie hangt samen met de nabijheid van het kanaal en de spoorweg. Het kanaal (Willebroekse Vaart aanpalend ten westen) bood zowel water, dat nodig was voor de productie, als een verbinding met Brussel; via de Rupel (ca. 2 km ten noorden) was er een verbinding met Antwerpen. Het sas lag vlak bij de Mechelsesteenweg. Daarbij kwam de aanleg en ingebruikname van de spoorlijn Mechelen-Terneuzen (ten noorden, noordoosten) met een halte in Willebroek.

De vestiging en de snelle groei van het bedrijf betekenden voor Willebroek de aanzet tot de omvorming van een landelijke gemeente van landbouwers, schippers en enkele kleinhandelaars tot een industriegemeente met een arbeidersbevolking.

4.2 Vóór 1860

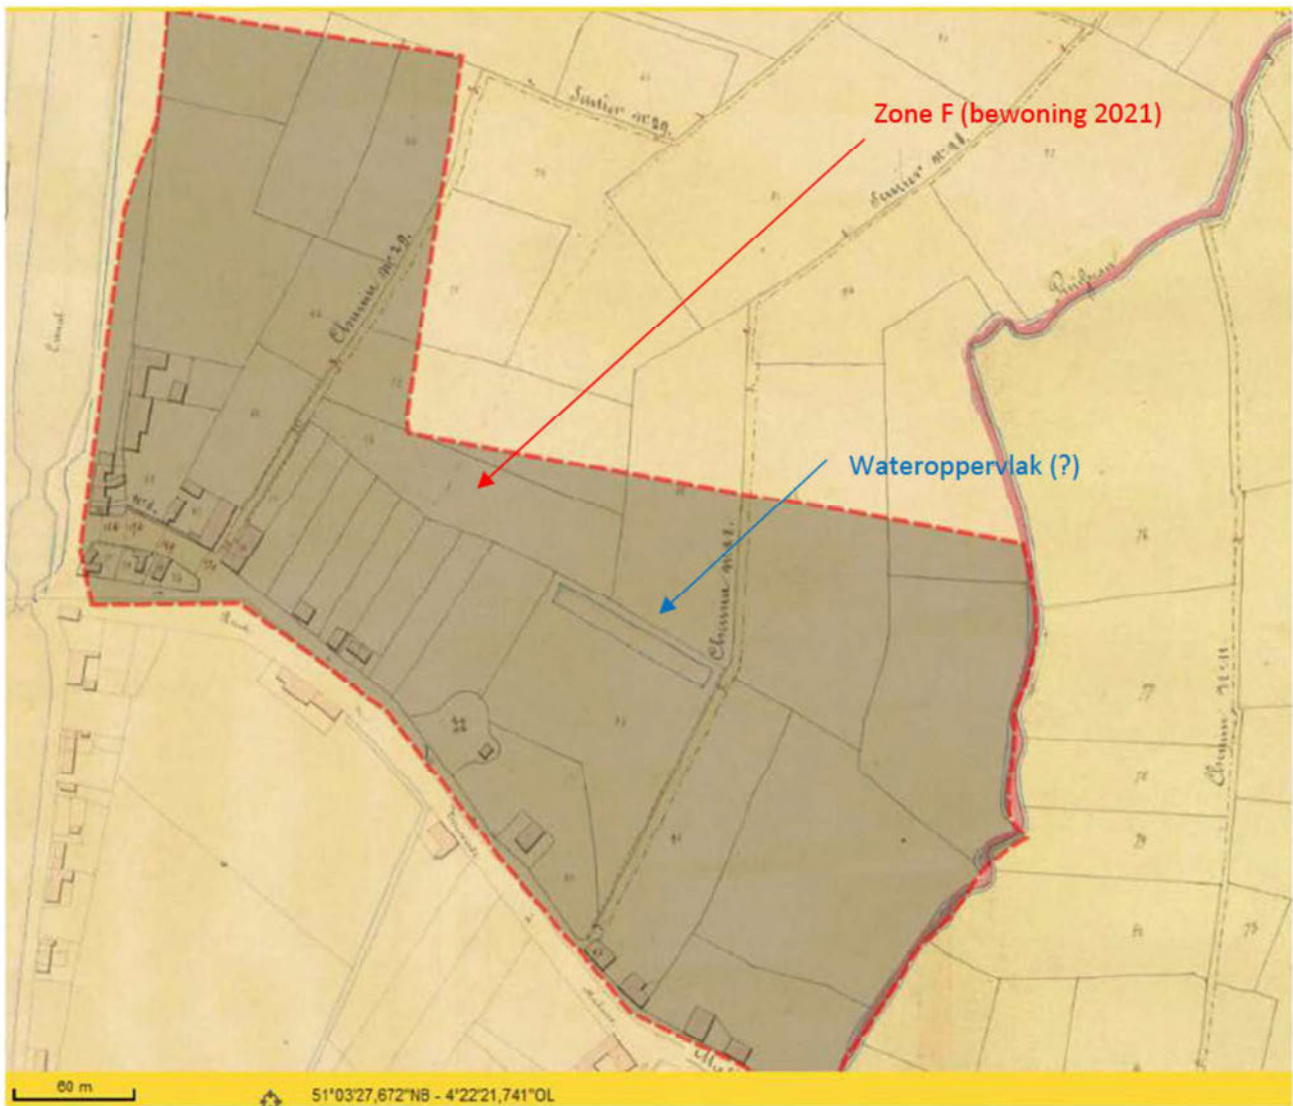

Tot 1860 was Willebroek een landbouwgemeente.

De kadastrale indeling anno 1841 t.h.v. zone F (huidige woonzone papierfabriek De Naeyer) is weergegeven in figuur 1. Ten westen bevindt zich de Willebroekse Vaart en langsheen de Mechelsesteenweg is bebouwing verspreid aanwezig.

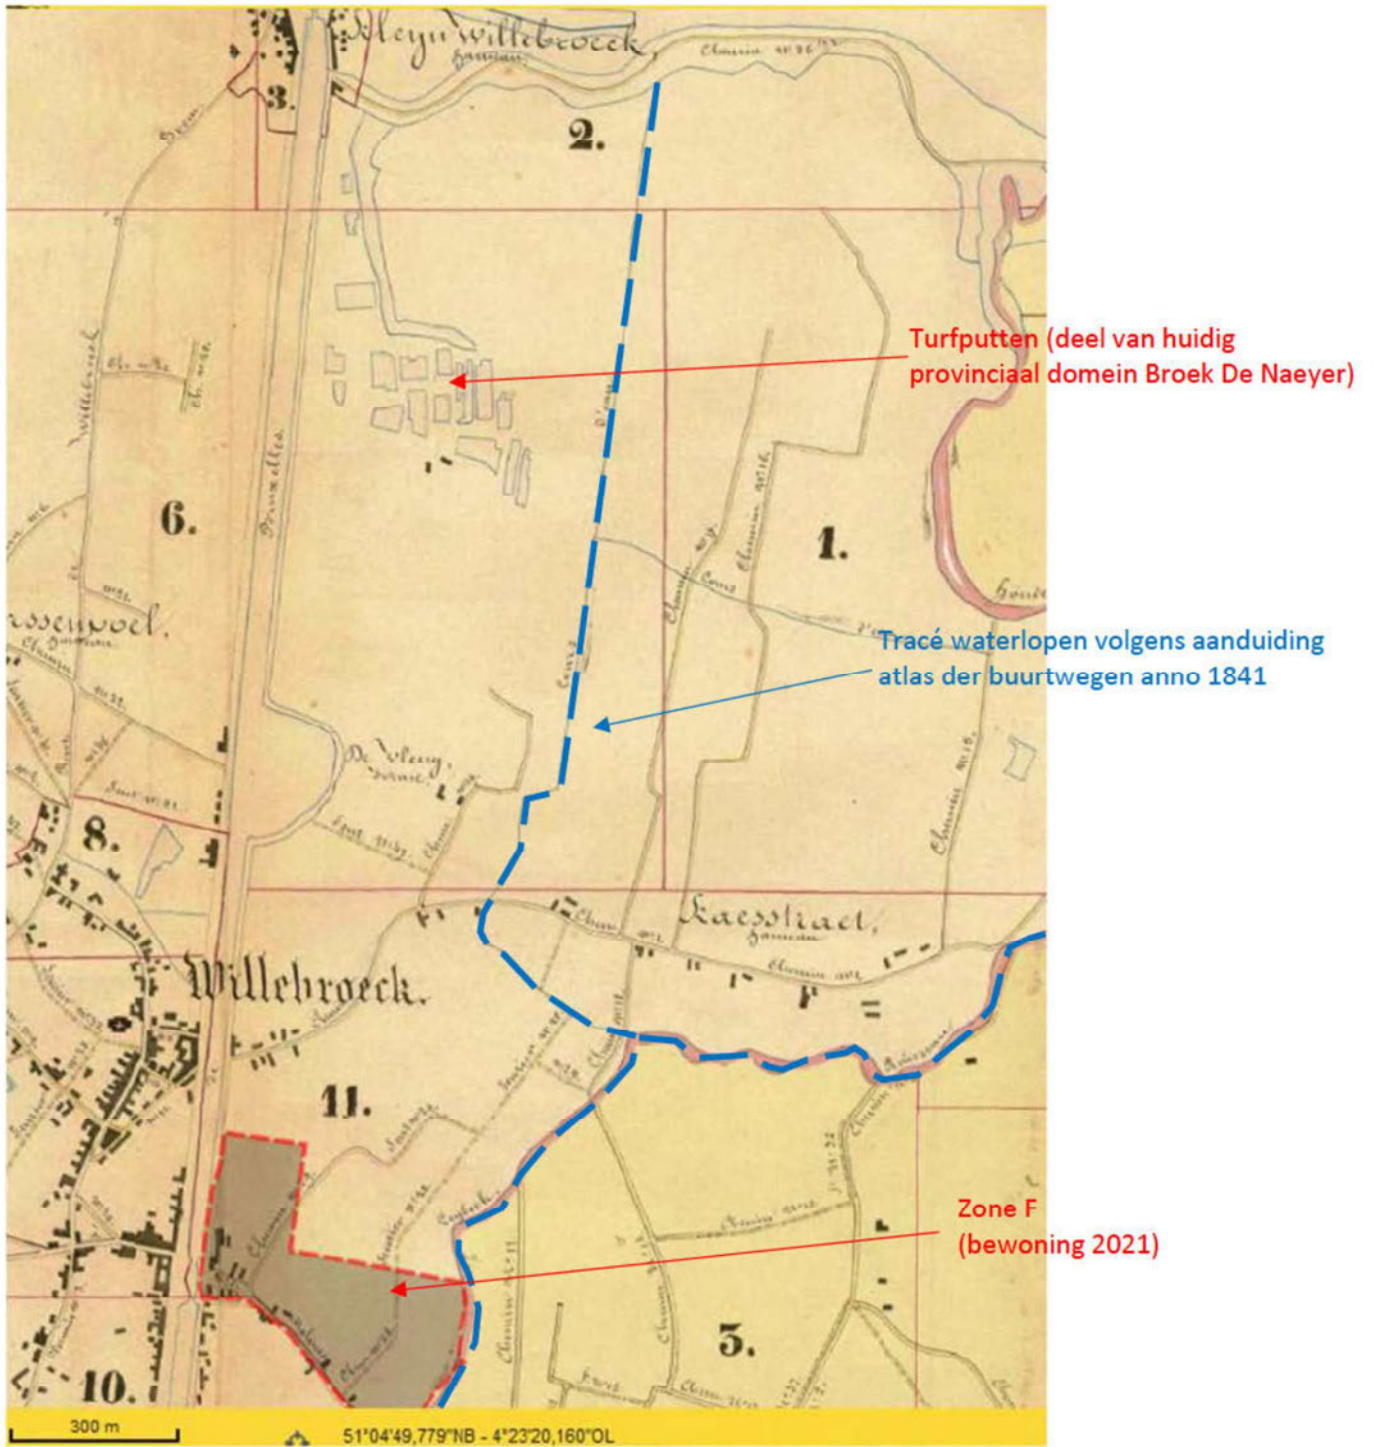

In figuur 2 is de zone vanaf de Mechelsesteenweg tot aan de Rupel weergegeven met aanduiding van het tracé van de waterlopen zoals aangeduid in de atlas der buurtwegen (anno 1841). T.h.v. het huidige Broek De Naeyer (provinciaal domein) waren in 1841 turfputten aanwezig.

In figuur 3 zijn meer in detail de tracés van de huidige waterlopen Fabrieksloop, Zwarte Beek en een gracht (anno 2021) aangeduid samen met de tracés van de waterlopen anno 1841. Hieruit volgt dat er in 1841 één zuid-noord georiënteerde waterloop aanwezig was; in 2021 lopen zowel de Fabrieksloop als Zwarte Beek van zuid naar noord quasi parallel aan elkaar.

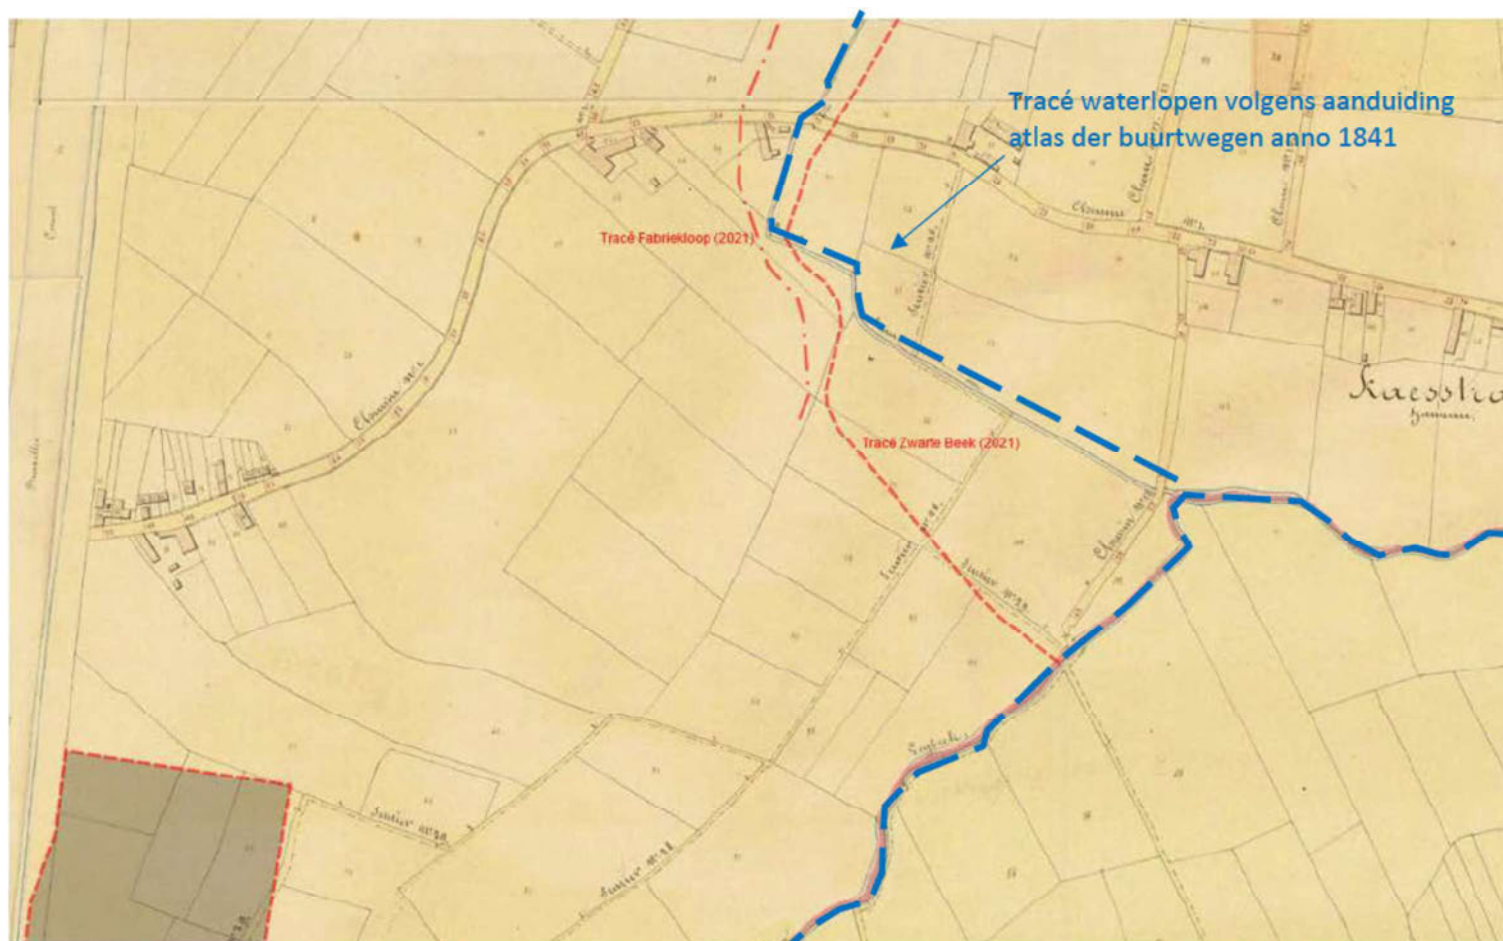

In figuren 4 en 5 wordt de verschillende ligging van de tracés van de waterlopen anno 1841 en anno 2021 verder geduid.

4.3 1860-1910

Op het kadastraal plan in figuur 6 (gebaseerd op de Popp kaarten (1842-1879)) zijn de eerste bedrijfsgebouwen van de voormalige papierfabriek De Naeyer al ingetekend (kant Willebroekse Vaart).

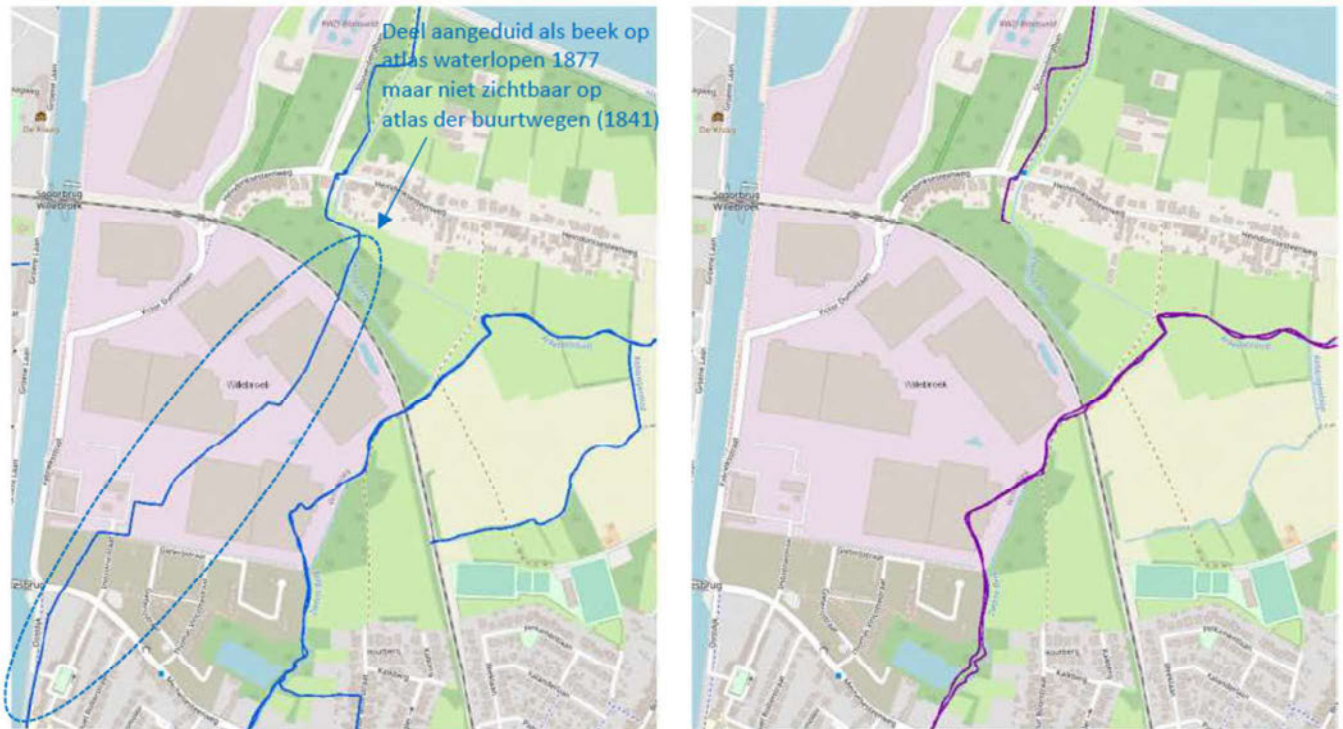

Op het zuidoostelijk deel van zone F (huidige woonzone papierfabriek De Naeyer) is een afgesloten wateroppervlak aangeduid.

Figuur 6 – Kadastrale indeling gebaseerd op Popp kaarten (1842-1879) thv zone F (huidige woonzone papierfabriek De Naeyer)

In figuur 3 (zie paragraaf 4.2) werden reeds de tracés van de huidige waterlopen Fabrieksliep, Zwarte Beek en een gracht (anno 2021) aangeduid samen met de tracés van de waterlopen anno 1841 zoals aangeduid op de atlas der buurtwegen.

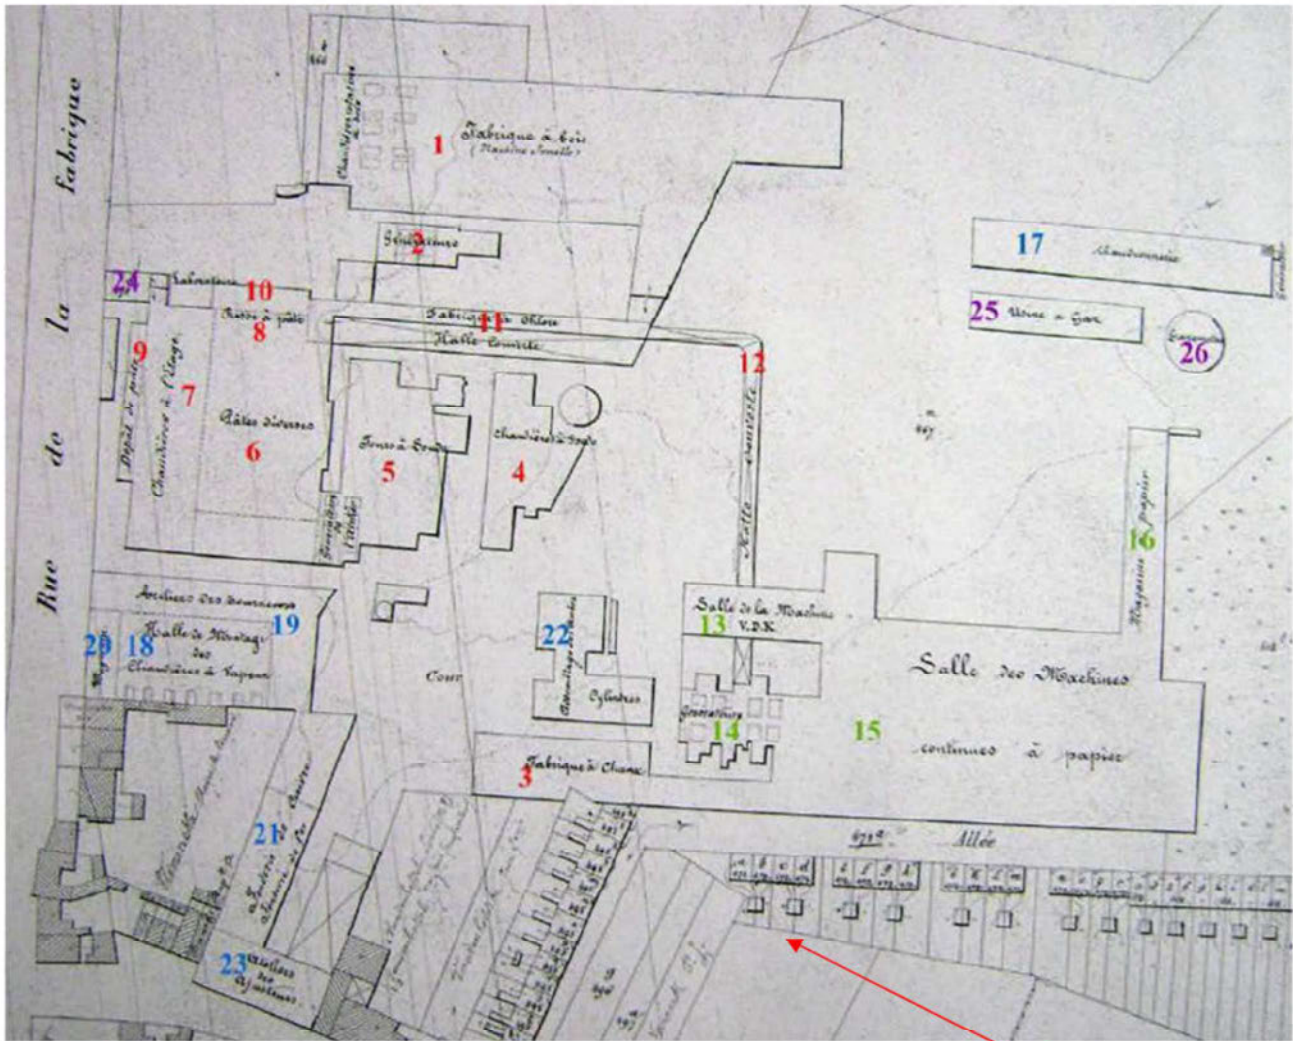

In figuur 7 werden de tracés van de waterlopen weergegeven zoals aangeduid in de atlas van de waterlopen anno 1877 en 1950. Het tracé van de beek dat in de atlas van de waterlopen anno 1877 aangeduid is en van zuidwest naar noordoost over het bedrijfsterrein van de voormalige papierfabriek loopt is niet terug te vinden op de kadastrale plannen uit de periode jaren 1841-1879 (zie figuren 3 en 6).

Figuur 7 – Tracés waterlopen volgens aanduiding in de atlas van de waterlopen anno 1877 (L) en 1950 (R)

In figuur 8 is de bedrijfsindeling van de papierfabriek anno 1887/1888 weergegeven waarbij de gebouwen en activiteiten ingedeeld worden in: afdeling (papier)deeg, afdeling papier(productie), afdeling constructie (ketelfabriek) en andere (waaronder gasfabriek).

Ten zuidoosten nabij de Mechelsesteenweg bevinden zich in die periode arbeiderswoningen.

In figuur 9 is de omvang en verdere uitbreiding van de papierfabriek weergegeven over de periode 1892-1930. Opvallend hierbij is het verder in gebruik nemen van de onbebouwde zone ten noorden/noordoosten (zone tot aan de spoorweg) voor waterbekkens. Deze oppervlaktewateren zijn met elkaar verbonden en zorgen voor het laten bezinken en vertraagd afvoeren van afvalwater (zie ook figuur 11).

4.4 Fabriekloop en Broek De Naeyer

Voor meer details omtrent de historiek van het Broek De Naeyer (huidig Provinciaal Domein Broek De Naeyer) en de afvoer van afvalwater van de papierfabriek De Naeyer in het verleden via de Fabriekloop en de vloeivelden in het Broek naar de Rupel wordt verwezen naar de beschrijving in het Uitgebreid bosbeheerplan 2016-2036 (UBP) (ontwerpversie 01/2015) en het verkennend waterbodemonderzoek dd. 17/06/2022 met aanvulling dd. 07/01/2022.

Een uittreksel en enkele bijlagen uit het verkennend waterbodemonderzoek dd. 17/06/2022 met aanvulling dd. 07/01/2022 zijn opgenomen in bijlage 1.

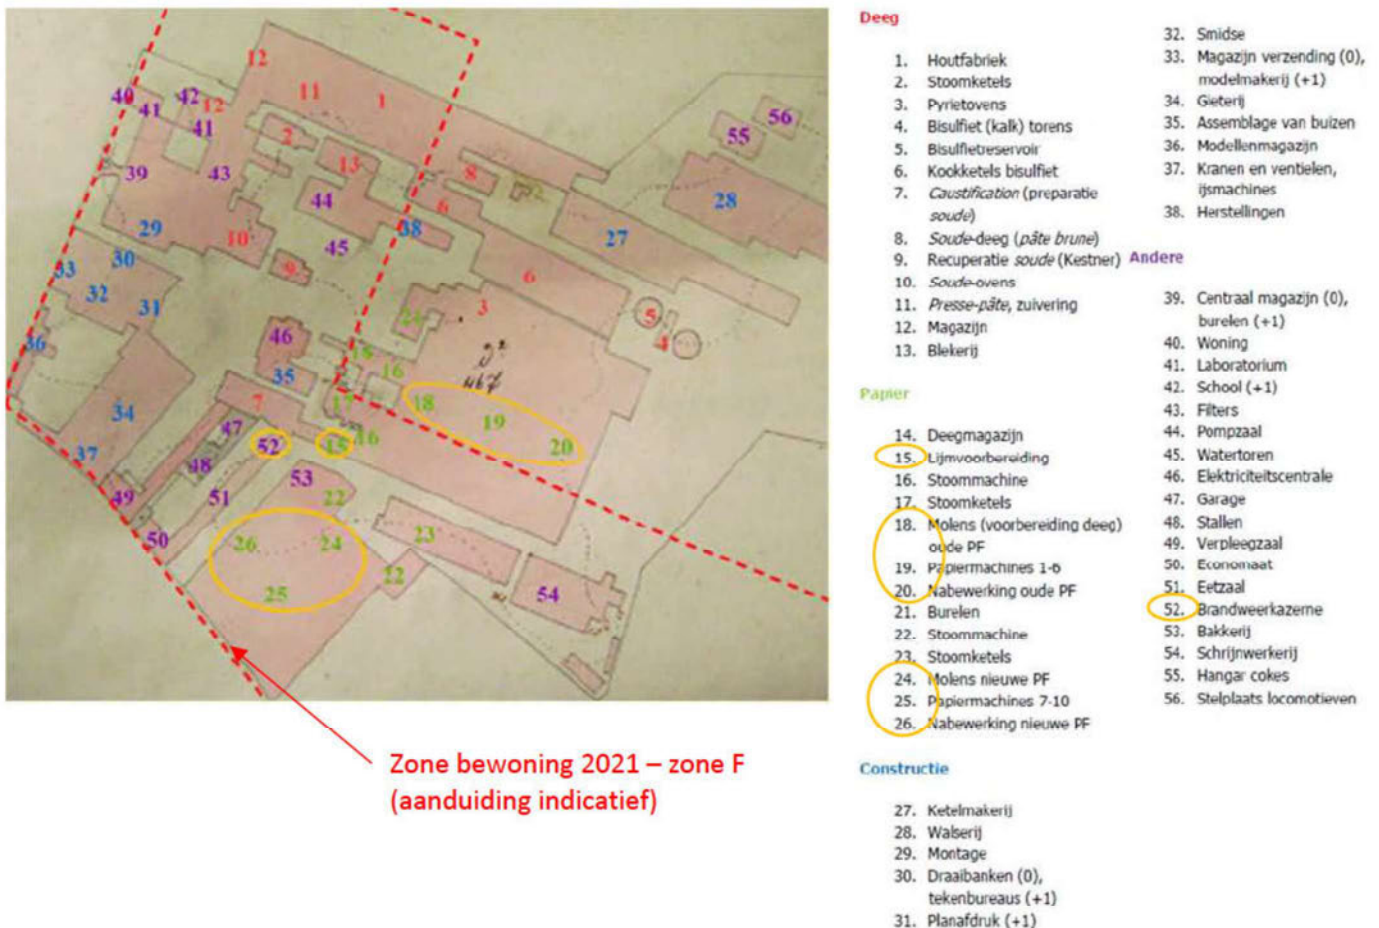

In voorliggend rapport wordt de historiek van het Broek De Naeyer niet verder in detail uitgewerkt.

4.5 1910-1950

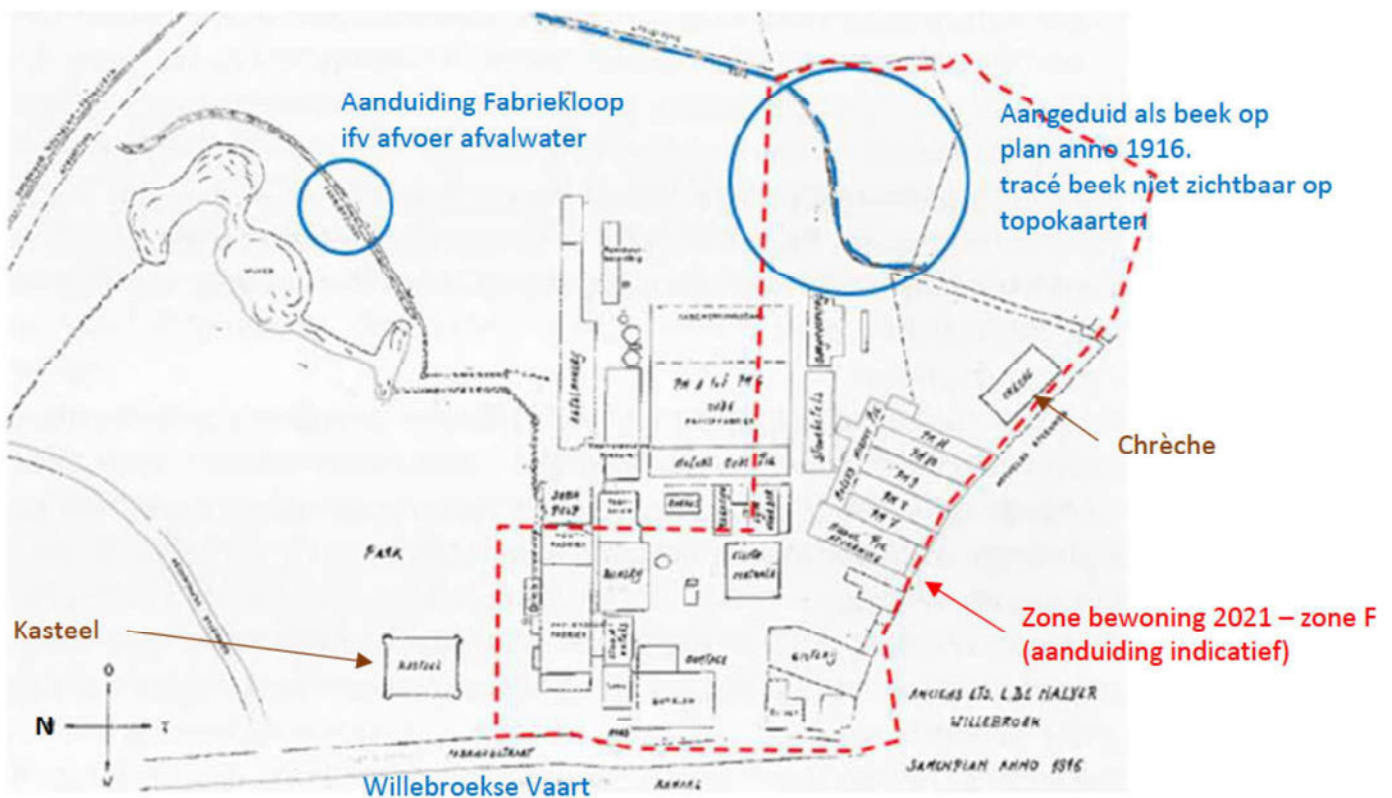

In figuur 10 is de bedrijfsindeling van de papierfabriek anno 1916 weergegeven waarbij de gebouwen en activiteiten ingedeeld worden in: afdeling (papier)deeg, afdeling papier(productie), afdeling constructie (ketelfabriek) en andere (waaronder elektriciteitscentrale en brandweerkazerne).

De arbeiderswoningen die zich bevonden ten zuidoosten nabij de Mechelsesteenweg zijn verdwenen voor bedrijfsgebouwen (in hoofdzaak afdeling papier(productie)).

In figuur 11 is de bedrijfsindeling schematischer weergegeven waarbij voor de afwatering van afvalwater ten noordoosten van de bedrijfsgebouwen de Fabrieksloop aangeduid wordt. Op het zuidoostelijk terreindeel (deel van huidige woonzone papierfabriek De Naeyer – zone F) is een beek aangeduid op het bedrijfsterrein die afstroomt in noordelijke richting en ten oosten (stroomafwaarts) van het bedrijfsterrein aantakt op de Zwarte Beek.

Figuur 10 – Bedrijfsindeling papierfabriek De Naeyer anno 1916

Figuur 11 – Bedrijfsindeling papierfabriek De Naeyer anno 1916 (Let op gewijzigde oriëntatie! N-richting niet naar boven!)

In figuur 12 zijn de verschillende tracés van de waterleidingen (zuiver water, afvalwater, bluswater) op het fabrieksterrein weergegeven. Hieruit volgt duidelijk dat sprake is geweest van een uitgebreid netwerk voor afvoer van afvalwater.

Paars = afvalwater

Rood = bluswater

Figuur 12 – Bedrijfsindeling papierfabriek De Naeyer anno 1916 – Tracés waterleidingen

In Figuur 13 is een luchtfoto weergegeven van de voormalige papierfabriek anno 1930.

Figuur 13 – Luchtfoto papierfabriek De Naeyer anno 1930

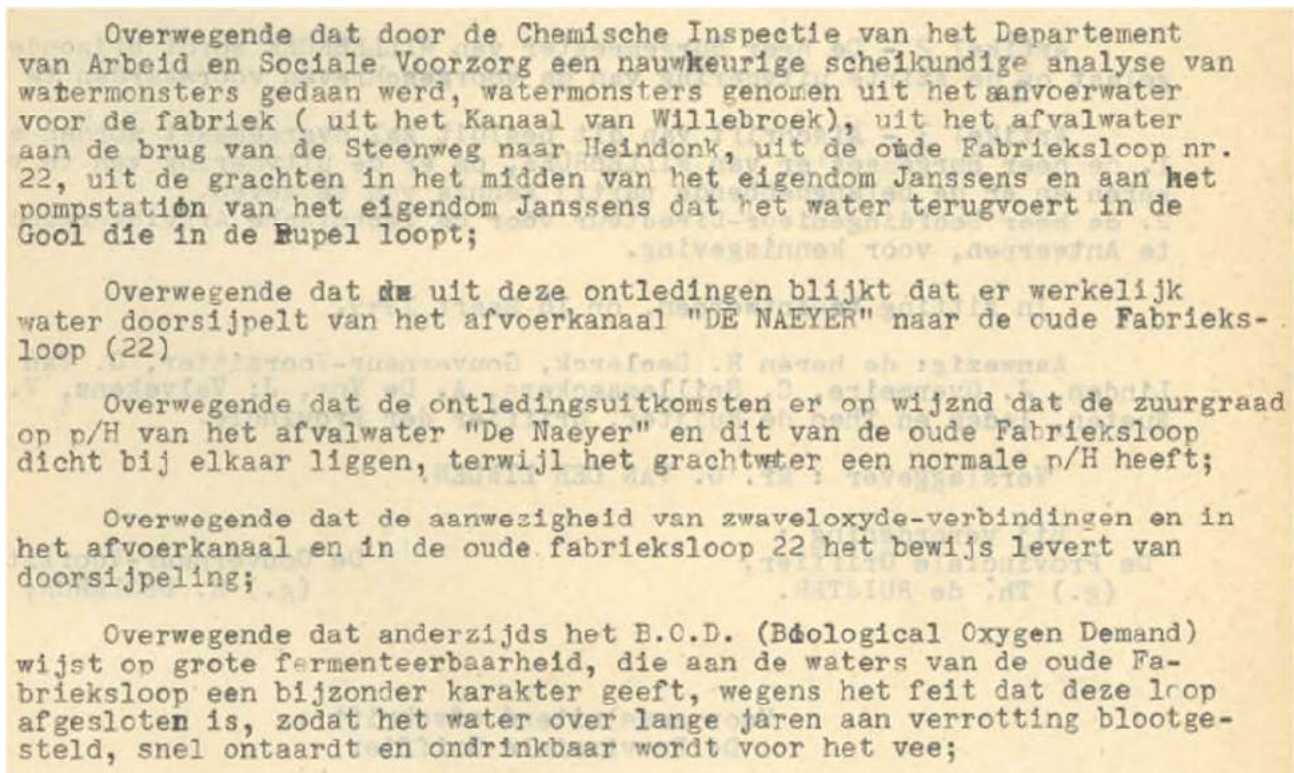

Het gebruik van grote hoeveelheden water in het productieproces zorgde ervoor dat ook afvalwater werd geproduceerd dat noordelijk afgeleid werd richting Rupel. Voor de afvoer van het afvalwater was voorzien in het gebruik van de Fabriekloop, echter gezien ook sprake is van een gracht op het oostelijk deel van de site die geconnecteerd was met de Zwarte beek werd mogelijk ook afvalwater geloosd via de Zwarte beek.

Omtrent de afvoer en behandeling van het afvalwater zijn in de loop der jaren klachten geregistreerd en werden in de vergunningen die afgeleverd werden bijkomende voorwaarden opgenomen.

In 1949 werd bijvoorbeeld een klacht geregistreerd wegens bezoedeling van waterloop nr 22 (oude Fabriekloop) door afvalwaters van de papierfabriek.

Uit staalname bleek dat er water doorsijpelt van het afvoerkanaal De Naeyer naar de oude Fabriekloop (waterloop nr 22) (zie vaststelling cfr opsomming in figuur 14).

Noot: Er werd geen plan teruggevonden waarop het afvoerkanaal De Naeyer en de oude Fabriekloop (waterloop nr 22) als dusdanig aangeduid en benoemd zijn. Vermoed wordt dat dit (delen van) de waterlopen ten noorden van de spoorweg betreft voor de afvoer van water richting Rupel (afvoer afvalwater en ontwatering polder).

Figuur 14 – Uittreksel uit besluit BD Provincie Antwerpen dd 18/03/1949

Dit leidde via besluit van de BD Provincie Antwerpen dd 18/03/1949 tot herziening van het besluit (vergunning) dd 25/08/1934: 'De ontlasting der afvalwaters zal geschieden. Te dien einde zal de

belanghebbende firma een geschikte zuiveringspost voor de afvalwaters van haar fabriek oprichten binnen de omheining van haar inrichting en vóór dat die afvalwaters de brug van de Heindonksesteenweg bereiken Het afvloeisel, voortkomend van de zuivering van de afvalwaters mag niet meer dan 30 mg drijvende stoffen per liter bevatten. Het afvloeisel ontvangen in de Nieuwe Fabriekslloop (of afvoerkanaal 'De Naeyer') mag geen stoffen bevatten die schadelijk zouden kunnen zijn voor dieren, die drinken aan de nabijliggende Oude Fabriekslloop (waterloop 22 of Polderbeek), welke ook deze stoffen uit oorzaak van doorsijpeling kan inhouden.'

4.6 1950-1990

In figuur 15 is de omvang van de papierfabriek weergegeven anno 1952 die intussen het overgrote deel van het terrein ingesloten tussen de Mechelsesteenweg ten zuiden, de Willebroekse Vaart ten westen, de Zwarte Beek ten oosten en de bocht van de spoorweg ten noordoosten omvatte.

Figuur 15 – Luchtfoto papierfabriek De Naeyer anno 1952

Door de jaren heen is ook het kwaliteitenpakket van het geproduceerde papier sterk geëvolueerd. Waar in de beginjaren van 1860 tot 1900 de nadruk lag op grafische kwaliteiten, aangevuld met eenvoudige verpakkingspapieren, werd vanaf begin 1900 meer aandacht geschonken aan de betere verpakkingspapieren voor specifieke doeleinden. Zo werden verschillende water- en vetafstotende kwaliteiten ontwikkeld; deze vonden hun toepassing in de productie van zakken en laminaten met onder andere aluminium voor margarine en boterwikkels en toepassingen voor de droge voedingssector.

Sinds begin jaren '60 werd ingezet op een nieuwe papierkwaliteit:

- Basispapier voor siliconisering – oppervlak afdekken met flinterdun laagje vloeibare siliconen
 - Verkocht onder merknaam DELTA – verschillende versies voor diverse toepassingen
- Verpakkingspapieren waaronder Greaseproof of vetdicht
 - Bijzondere technische eigenschappen waaronder weerstand tegen vette en olieachtige producten
 - Weerstand tegen indringen van vetten
 - Hooggemalen vetwerende papieren werden in de jaren '60 vervangen door een nieuwe generatie vetdichte kwaliteiten, PERGA kwaliteiten:
 - Vetwerend door oppervlakbehandeling in de lijmpers met 'uniek' chemisch product (niet langer door raffineren zoals voorheen)
- Fijne hoogwaardige verpakkingspapieren maakten sinds begin jaren '60 tot 95% van de productie uit

De eerste vergunning uit die periode waar een meer gedetailleerde beschrijving van deze activiteiten zou kunnen in opgenomen zijn dateert uit 1969:

- Milieuvergunning NV Denaeyer voor het exploiteren van een papierfabriek en een ketelmakerij (ARAB, 40.265, BD dd 16/09/1969, basisvergunning tot 25/04/1994)
- Vergund voor o.m.
 - Opslag ontvlambare vloeistoffen (600 m³ extra zware fuel, 124 m³ stookolie en gasolie, 11 m³ benzine)
 - Werkplaatsen voor fabricage van inpakpapier (figuur 16)

f) twee afdelingen voor de voorbereidende bewerkingen of papierdeeg zoals malen, drogen, toevoegen van kleurstoffen en additieven voor de kwaliteitsbepaling van het papier, toegerust met honderd en twee elektromotoren van 0,25 tot 190 pk (samen circa 5.650 pk) voor het drijven van roerders, pompen, kegelmolens, mengmachines, indiktrommels, enz, alsmede drie Ward Leonardgroepen met elektromotoren van 3,5 tot 510 pk (samen circa 2.000 pk)

g) een afdeling voor het stockeren en verwerken van vast papierdeeg, oud papier en papierafval tot vloeibare papierdeeg en een afdeling voor het bereiden van toevoegvloeistoffen voor papier, met chemisch laboratorium, toegerust met negenendertig elektromotoren van 0,25 tot 225 pk (samen circa 1.260 pk) voor het drijven van pompen, mengapparaten, ontvezelaars, heftoestellen en een persmachine, alsmede een opslagplaats van maximum 500 ton vast papierdeeg en een Ward Leonardgroep met elektromotoren van samen 990 pk,

h) de afdelingen voor het verwerken van papierdeeg tot papier toegerust met drie wachtkuipen voor papierdeeg met vijftien elektromotoren van 2 tot 50 pk (samen 260 pk) voor het drijven van pompen en roerders, zeven papiermachines en hulptoestellen met driehonderd vierentachtig elektromotoren van 0,5 tot 440 pk (samen circa 7.900 pk) en drie Ward Leonardgroepen met elektromotoren van 1 tot 91 pk (samen circa 1.370 pk),

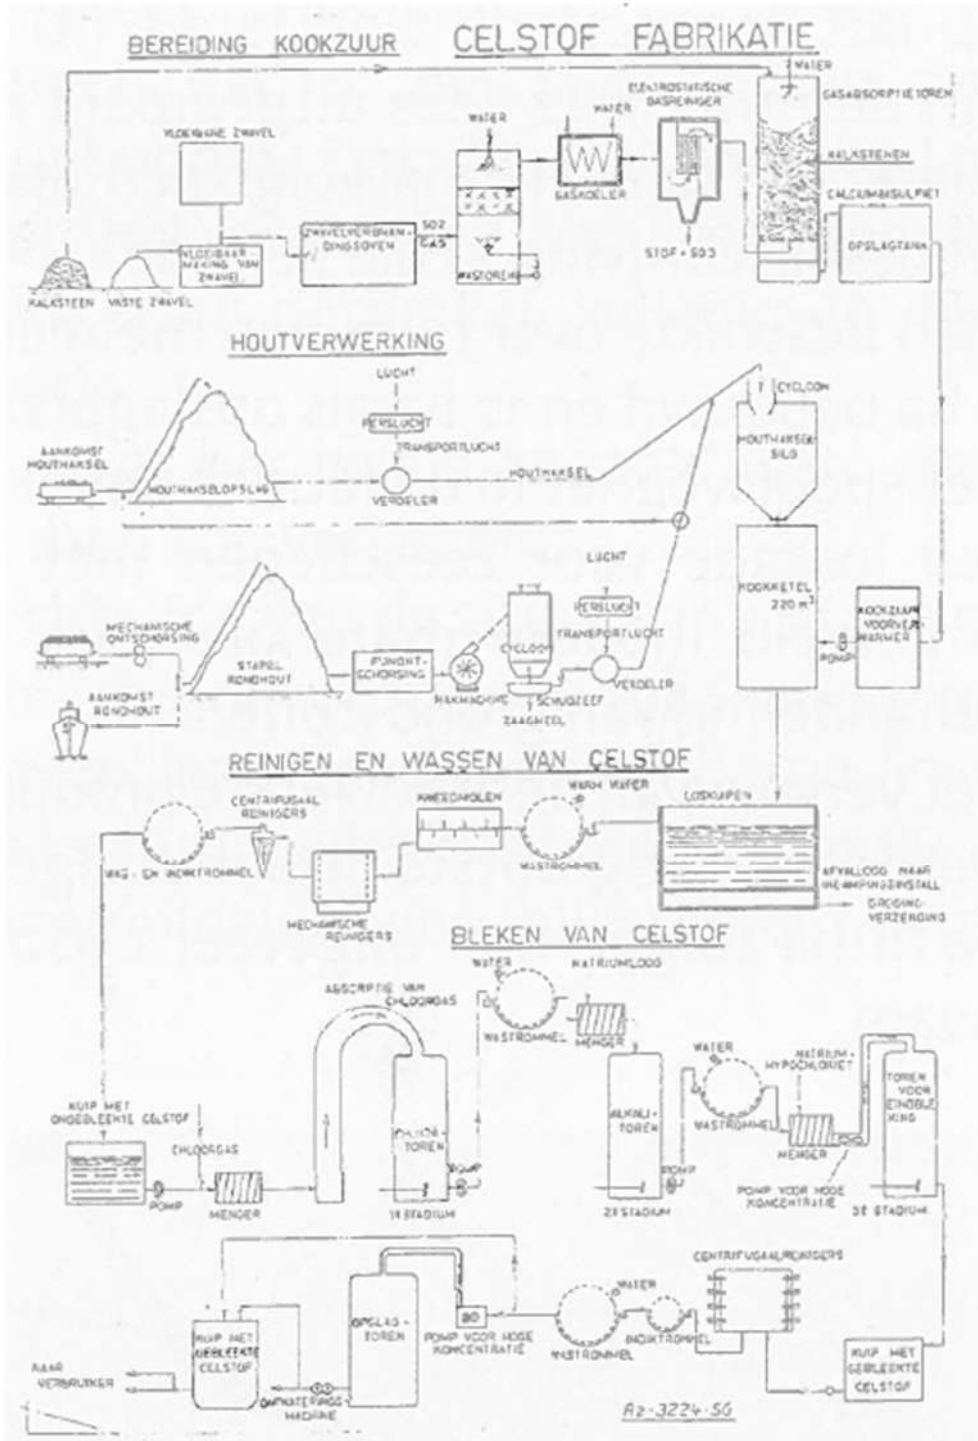

i) een afdeling voor het afwerken, sorteren, snijden, oprollen, verpakken en verzenden van papier toegerust met honderd zestien elektromotoren van 0,25 tot 500 pk (samen circa 1.800 pk) voor het drijven van pompen, persen, snijmachines, oprolmachines, inpakmachines, liften, takels, ventilatoren en compressoren, alsmede drie Ward Leonardgroepen met elektromotoren van 8 tot 650 pk (samen circa 1.760 pk),

Figuur 16 – Uittreksel uit besluit BD Provincie Antwerpen dd 16/09/1969

In de vergunning anno 1969 zijn geen directe verwijzing naar gebruik van chemische producten terug te vinden voor behandeling van papier.

Er werd geen bijkomende info in de vergunning noch in het aanvraagdossier teruggevonden m.b.t. het gebruik van PFAS. De info m.b.t. de gebruikte producten is in het aanvraagdossier zeer summier (geen overzichtslijst van gebruikte producten) opgenomen.

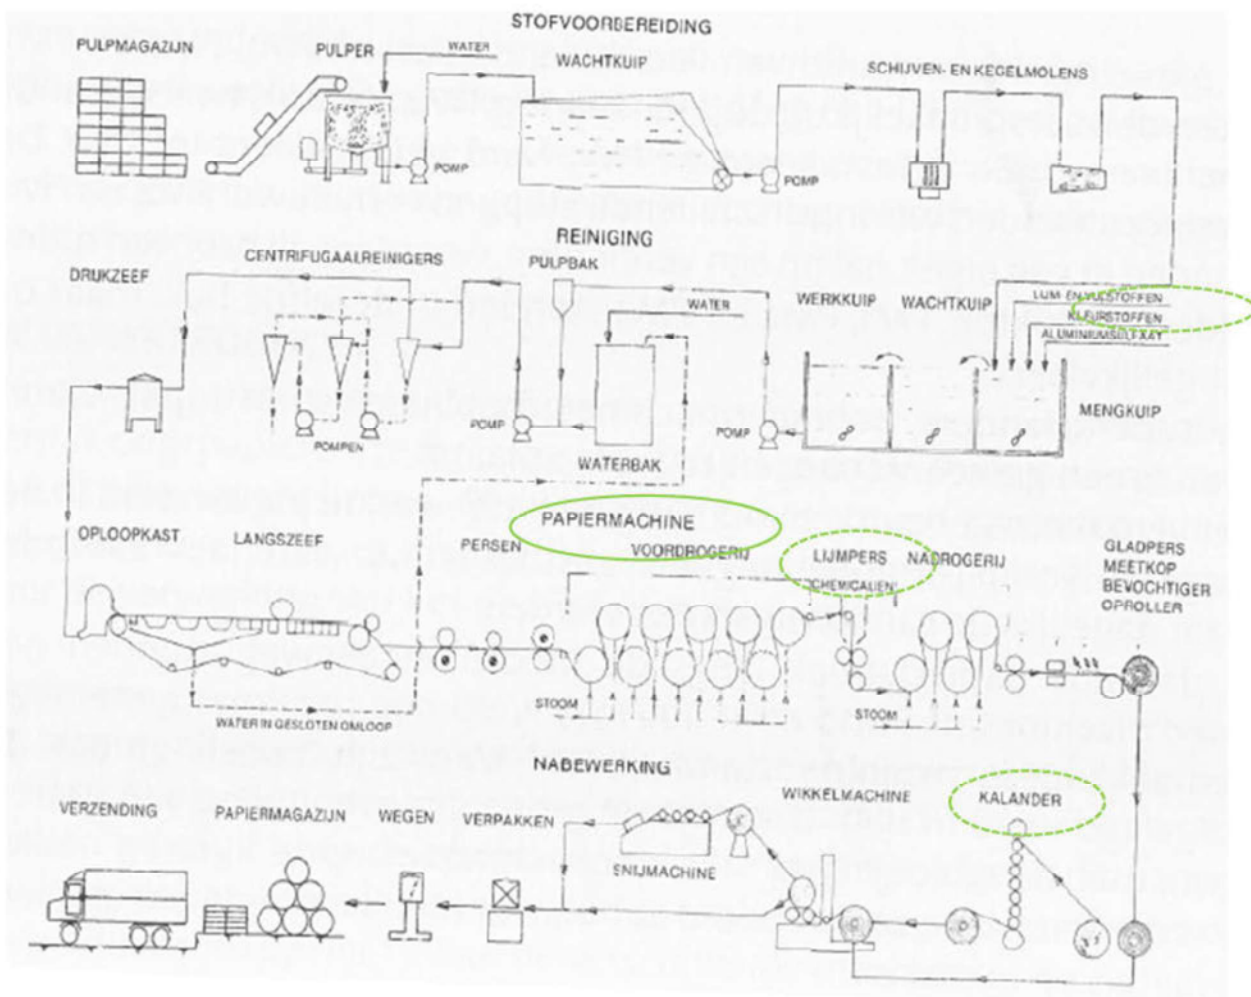

In figuur 17 is schematisch het proces van de papierdeegproductie weergegeven. De papierdeegproductie werd in 1985 stopgezet. Al in 1963 werden strengere eisen gesteld aan de lozing van afvalwater in de Rupel maar de milieuproblematiek (zuivering van afvalwater) werd nooit onder controle gekregen.

Figuur 17 – Schema papierdeegproductie

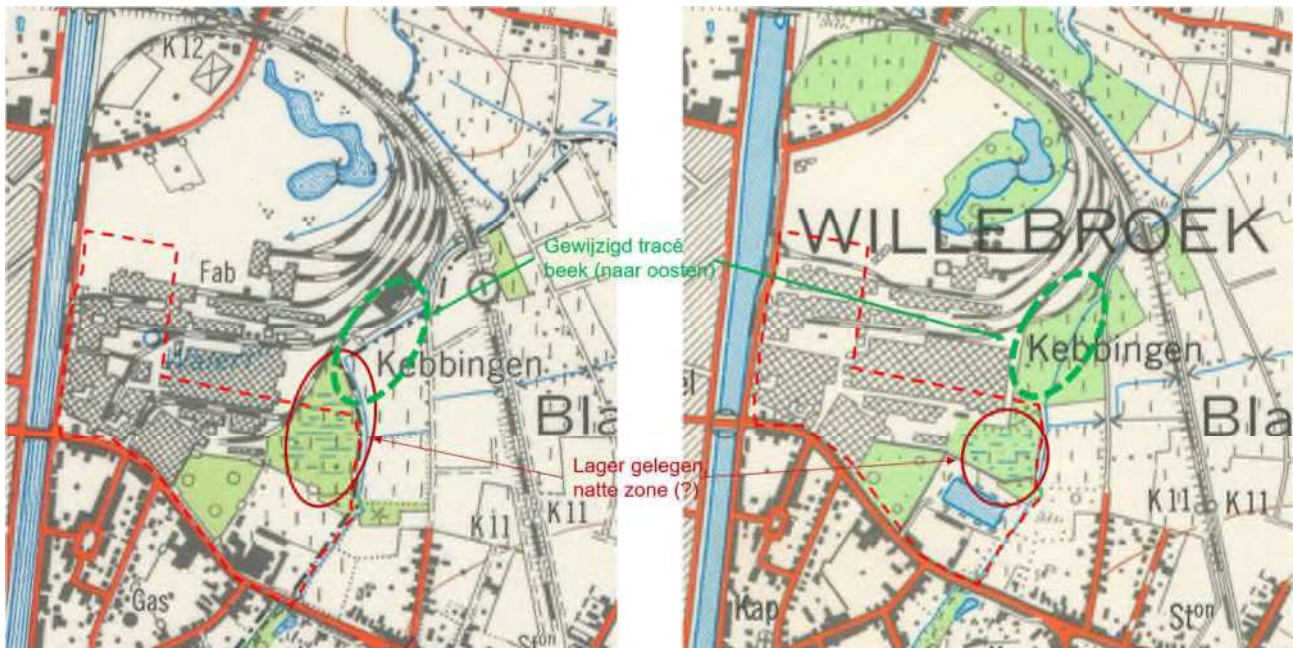

In figuur 18 is schematisch het proces van de papierproductie weergegeven:

- **Lijmen:** 'Hierbij worden de vezels omringd met een film van hars, waardoor vochtabsorptie van het papier vermindert. Dit gebeurt in de aanwezigheid van aluminiumionen, die het hars neerslaan op de vezels.'
- **Vulstoffen en andere hulpmiddelen:** 'Talk, titaanoxide, zetmeel en kleurstoffen vullen de poriën en geven of verbeteren bepaalde fysische eigenschappen aan celstof of aan het papier.'
- **Lijmpers:** 'Deze is tussen 2 batterijen van droogcilinders ingebouwd en bestaat uit 2 walsen. De lijmpers heeft tot doel de papierbaan te behandelen met een product om welbepaalde eigenschappen van het papier te verbeteren, zoals de bedrukbaarheid, het vlakliggen, de vet- en oliedichtheid en de siliconeerbaarheid.'
- **Superkalander:** 'Bestaat uit 16 walsen die verticaal op elkaar liggen. De walsen worden met stoom verwarmd tot boven 200 °C en op elkaar gedrukt met zeer hoge lijndruk. Het papier wordt tussen deze walsen samengedrukt en wordt door de hitte, de druk en de wrijving tegelijk glad, glanzend, doorschijnend en volledig gesloten.'

Figuur 18 – Schema papierproductie

In figuur 19 is de omvang en verdere uitbreiding van de papierfabriek weergegeven over de periode 1960-1978. De papierfabriek werd verder uitgebreid in oostelijke richting waarbij het tracé van de Zwarte Beek t.h.v. de huidige KMO-zone gedeeltelijk verlegd werd naar het oosten. In 1978 is ook de (huidige) vijver zichtbaar met daar ten noorden van een lager gelegen natte zone; dit is de zone die in de 2^{de} helft van de vorige eeuw aangeplant werd met bomen (zone huidige Smederijstraat).

In figuren 20 en 21 worden de luchtfoto's anno 1965 en 1971 weergegeven en in figuur 22 is de bedrijfsindeling van de papierfabriek in de jaren '70 weergegeven waarbij de gebouwen en activiteiten ingedeeld worden in: afdeling (papier)deeg, afdeling papier(productie), afdeling constructie (ketelfabriek) en andere (waaronder brandweerkazerne en elektriciteitscentrale).

In figuur 26 wordt uitgezoomd om de zone ten noorden van het bedrijfsterrein en de spoorweg weer te geven. Op de luchtfoto anno 1971 zijn de tracés van de waterlopen anno 2021 (Fabriekloop, Zwarte Beek en gracht) aangeduid.

De Zwarte Beek volgde in 1971 reeds zijn huidige tracé; de Fabriekloop was nog niet parallel aangelegd in zijn huidige tracé. Op de onbebouwde zone te noorden/noordoosten zijn de waterbekkens voor het laten bezinken en vertraagd afvoeren van afvalwater duidelijk zichtbaar.

In figuur 27 wordt het huidige tracé van de waterlopen ten noorden van de spoorweg aangeduid op de luchtfoto anno 1989. Hierop is de nieuw aangelegde steenweg ten noorden van de Heindonksesteenweg (Stuyvenbergbaan) zichtbaar waarbij het huidige tracé van de Fabriekloop ten westen ervan aangelegd werd.

4.7 Grondeigendommen papierfabriek De Naeyer 1907-1990

Sinds de oprichting van de papierfabriek De Naeyer werden meerdere gronden verworven begrensd door de Mechelsesteenweg ten zuiden, de Willebroekse Vaart ten westen en de Rupel ten noorden:

- 1907
 - 128,5 ha
 - Industriële gronden
 - Bossen, landbouwgronden en weiden
 - Vijvers en bezinkingsbekkens
- Jaren '70
 - Tot 150 ha
 - 11 ha bebouwd en 12 ha als opslagruimte
 - 12,5 km spoorwegennet
 - Eigen loskade voor zeeschepen
- 1990
 - 122,5 ha
 - Openbare verkoop van 105 ha (17,5 ha zuidelijk deel fabriekssite niet in openbare verkoop 1990)
 - 105 ha verdeeld in 26 loten voor verkoop: bouwgronden, bouw-, hooi- en weilanden, vage gronden
 - Waarvan 60 ha Broek De Naeyer aangekocht door Prov Antwerpen (waar lozing afvalwater via Fabriekloop en bezinkingsputten plaatsvond) en
 - 41 ha aangekocht door dhr Sienart – in pacht door WenZ (Vlaamse Waterweg) sinds 2000 en vestiging nieuwe bedrijven

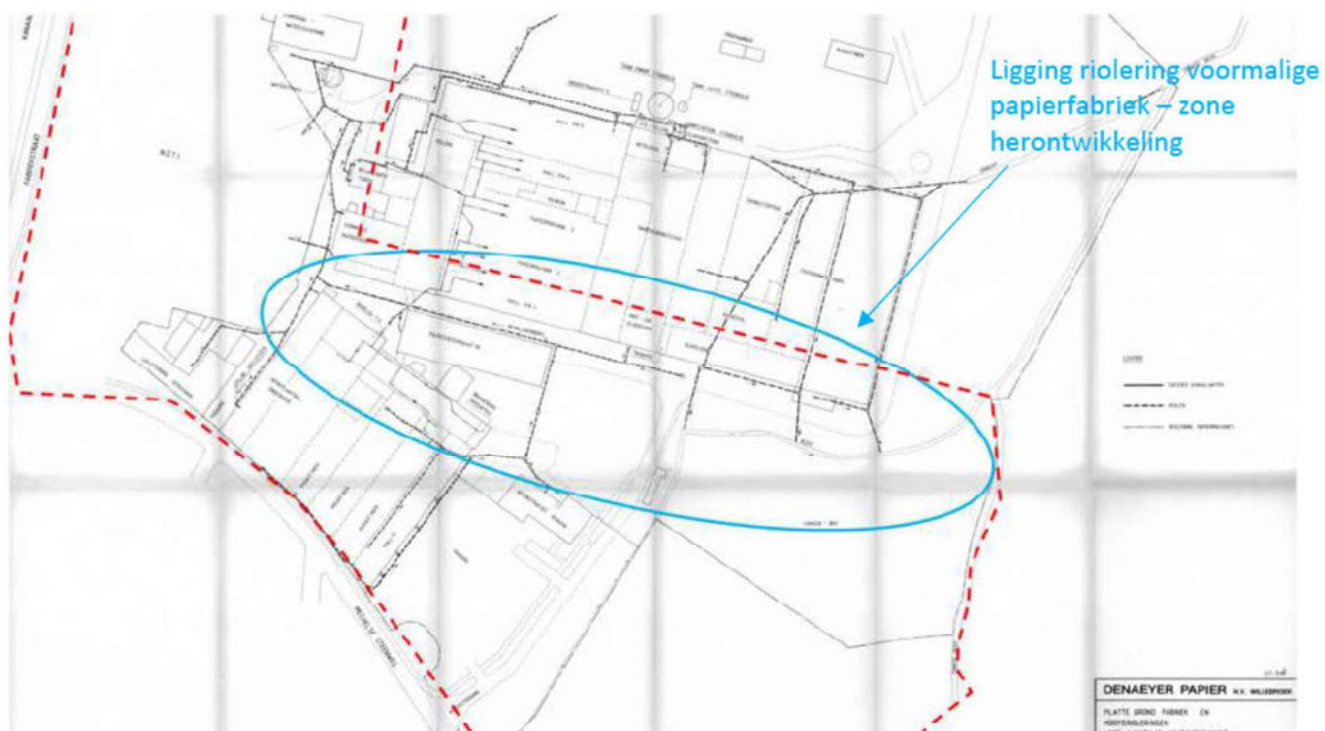

(Gronden in eigendom tot 1990 – zie aanduiding op plannen in bijlage 2)

4.8 Vergunning 1993 – Gebruikte stoffen

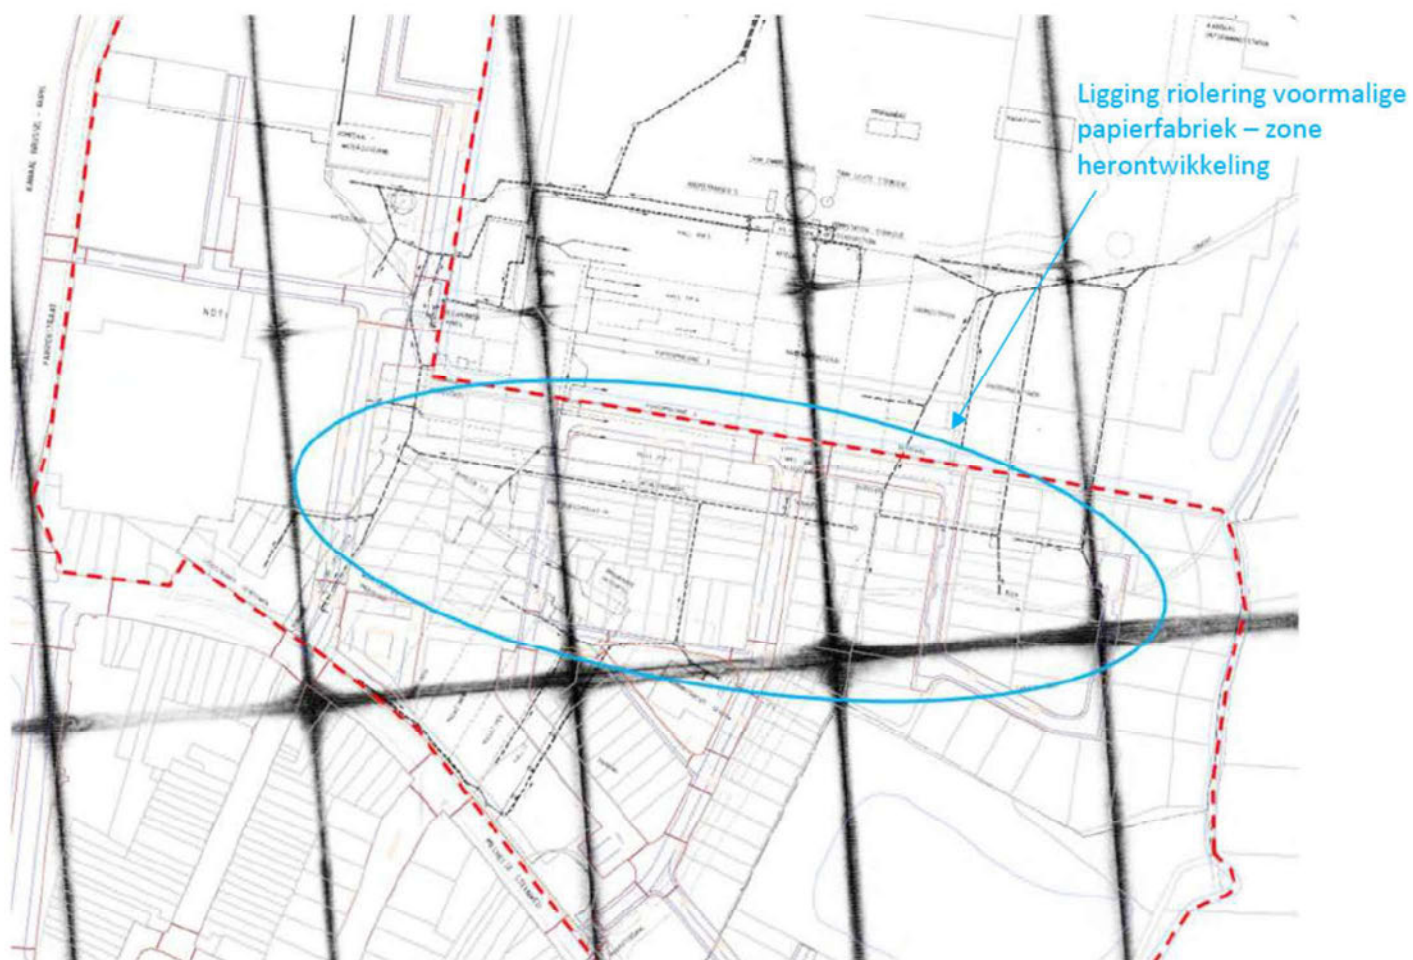

Zoals aangegeven in in paragraaf 4.5 was de vergunning dd. 16/09/1969 de basisvergunning tot 25/04/1994. In 1993 werd een nieuwe vergunning verleend voor het verder exploiteren van de papierfabriek. Zowel in de vergunning als in het aanvraagdossier werd nagekeken of er info aanwezig is m.b.t. het gebruik van PFAS:

- Milieuvergunning NV Denaeayer voor het verder exploiteren van een inrichting voor papierproductie dd. 26/08/1993
- Op datum van indiening milieuvergunningsaanvraag waren volgende vergunningen van toepassing:
 - ARAB, 40.265, BD Provincie Antwerpen dd 16/09/1969, basisvergunning tot 25/04/1994 (meerdere uitbreidingen)
 - Lozing ander dan normaal huisafvalwater op Rupel, Vlaamse Waterzuiveringsmaatschappij dd. 08/01/1987 tot 01/09/2011
- Vergund voor o.m.:
 - Aanbrengen van lijmen door indompeling
 - Opslag van 5 ton chroomstearaat (giftig)
 - Opslag van 159.750 liter corrosieve stoffen zoals chloorwaterstofzuur, zwavelzuur 80%, NaOH, AlSO_4 -oplossing NaOCl, mierzuur en dispergeermiddelen
 - Opslag van 1 ton white spirit
 - Bovengrondse opslag 30.000 liter lichte stookolie en 1.000.000 liter zware stookolie
 - Opslag van 15.000 liter smeerolie in vaten
 - Verwerking van 50 ton asbestpapier per jaar
 - Opslag van 11 ton kleurstoffen en pigmenten
 - Opslagplaats voor 70 ton lijmen
- In de milieuvergunning (MV) van NV Denaeayer voor het verder exploiteren van een inrichting voor papierproductie dd. 26/08/1993 is sprake van opslag van ‘dispergeermiddelen’:
 - Er zijn geen verdere details opgenomen in de MV omtrent hoeveelheden, samenstelling en toepassing in het productieproces
 - Er is wel bijkomende info opgenomen in het aanvraagdossier van de MV anno 1993, m.n. een olijsting van de gebruikte stoffen in het productieproces:
 - Fluorcarbonverbindingen (= PFAS) (verbruik 35 ton/jaar)
 - Chroomstearaat (complex III-waardig) (verbruik 15 ton/jaar)
 - Ureumformaldehyde-oplossing (verbruik 400 ton/jaar)
 - Schoonmaakproducten (omschreven als ionische en nonionische detergenten) (verbruik 35 ton/jaar)
- Op basis van info uit de literatuur volgt dat:
 - Dispergeermiddel = een stof die ervoor zorgt dat fijn gemalen stoffen zich fijn verdelen en niet vlokken; soms ook benoemd als surfactant of oppervlakte actieve stof;
 - Het gebruik van PFAS in en als dispergeermiddel is uitgebreid gedocumenteerd in de literatuur.

In figuur 28 is het rioleringsplan uit de milieuvergunningaanvraag anno 1993 weergegeven. In figuur 29 is de kadastrale indeling anno 2021 geprojecteerd op het rioleringsplan anno 1993.

4.9 1985-2004

In de geraadpleegde documenten en bronnen wordt de neergang en ondergang van het bedrijf uitvoerig en in detail beschreven. Deze begon algemeen in 1973 met de oliecrisis en leidde in 1986 tot het eerste faillissement van de papierfabriek De Naeyer.

De belangrijkste gebeurtenissen in de periode 1985 tot het tweede faillissement in 2004 zijn:

- 1985: Papierdeegproductie (definitief) stopgezet
- 1986: Faillissement papierfabriek De Naeyer
- 1986: Overname papierfabriek De Naeyer door de Gelderse Papiergroep
 - Producent van hoogwaardige papierspecialiteiten voor de grafische, label- en verpakkingsindustrie
 - Papierdeegfabriek wordt niet opnieuw opgestart
- 1988: Sloop gebouwen pulpfabriek (papierdeegfabriek)
- 1990: Verkoop gronden papierfabriek De Naeyer (105 ha – zie paragraaf 4.6) m.u.v. fabriekssite (17,5 ha)
- 1998-1999: Verkoop papierfabriek via management buy-out gevolgd door overname door Italiaanse groep Ermolli
- 2004: Ontbinding De Naeyer papier NV
 - Enkel de afdeling ketelbouw CMI (Cockerill Mechanical Industries), die een aparte entiteit was, kon doorgaan met zijn activiteiten (intussen geherlocaliseerd).

In figuur 30 wordt de luchtfoto anno 1995 weergegeven.

4.10 Brownfieldconvenant, herontwikkeling en grondverzet

In 2009 werd een brownfieldconvenant (BFC 4 'Denaeyer Willebroek') opgemaakt m.b.t. de herontwikkeling van het zuidelijk deel van de site van de voormalige Papierfabriek De Naeyer tot woonzone; aansluitend ten noorden is een KMO-zone voorzien.

In figuur 31 wordt de luchtfoto anno 2021 weergegeven.

Bij de omvorming van het fabrieksterrein tot woonzone en KMO-zone (ophoging terreindelen, aanleg wegenis, aanleg groenbuffer/geluidsberm, ...) zijn grondwerken uitgevoerd en heeft grondverzet plaatsgehad.

Op vraag van OVAM werd door Sertius een eerste screening uitgevoerd van de informatie die m.b.t. grondverzet beschikbaar is voor de site van de voormalige Papierfabriek De Naeyer te Willebroek. Bij de bodembeheersorganisaties Grondbank en Grondwijzer werd een overzicht opgevraagd (11/2021) en de betreffende dossiers en documenten werden ter inzage overgemaakt. Na overleg tussen OVAM en de projectontwikkelaar Matexi werd bijkomende informatie aangeleverd door Matexi omtrent het uitgevoerde grondverzet bij de recente herontwikkeling van hun terreindelen.

De screening van de informatie m.b.t. grondverzet is opgenomen als bijlage 3.

5. NABESCHOUWING

In voorliggend rapport wordt nagegaan welke informatie beschikbaar is omtrent de historiek van de voormalige papierfabriek De Naeyer en omgeving.

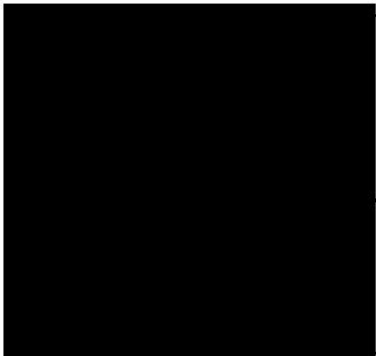

De nadruk lag hierbij op het zuidelijk deel van het voormalig fabrieksterrein die omgevormd werd tot woonzone (zone F, huidige woonzone papierfabriek De Naeyer).

Ook de historiek van de waterlopen en de gewijzigde tracés ten noorden van de spoorweg worden in het kort gedeut.

Binnen het kader van deze opdracht was het niet mogelijk om tot in detail en tot op (huidig kadastraal) perceelsniveau de historiek aan te geven of te verduidelijken.

Voorliggend document heeft voornamelijk tot doel om de resultaten van het siteonderzoek (in uitvoering) en het waterbodemonderzoek (nog op te starten) binnen een ruimer kader te kunnen evalueren.

2.4 HISTORISCH ONDERZOEK

2.4.1 Lozers

2.4.1.1 Papierfabriek De Naeyer

De Fabriekloop is een lange rechte gracht die in het verleden (vóór 1850) doorheen het provinciaal domein 'Broek De Naeyer' werd gegraven om het afvalwater van de papierfabriek De Naeyer af te voeren richting Rupel.

- Op de Vandermaelen kaart dd. 1850 is het traject van de huidige Fabriekloop reeds aanwezig.
- Rond 1888 is er sprake van een vloeiveld waarover het afvalwater van de fabriek geleid wordt. Het is een vlakte van 50 ha dat voor dit doel in drie verdeeld werd waarbij steeds een deel bevoeid werd waardoor alle verontreinigingen afzetten en het gezuiverde water nadien in de Rupel loopt. Waarschijnlijk betreft dit een vloeiveld op het bedrijfsterrein naast de fabriek De Naeyer zelf (ten zuiden van de spoorlijn Mechelen - Sint-Niklaas).
- Op de topografische kaart 1978-1981 zijn ten oosten van de Fabriekloop de bezinkingsbekkens ingetekend binnen Broek De Naeyer zoals deze op heden nog grotendeels aanwezig zijn. Deze bekkens dienden voor de zuivering van het afvalwater van de fabriek De Naeyer nadat de zone waar het vloeiveld was op het bedrijfsterrein in gebruik werd genomen bij uitbreiding van het bedrijf. De bekkens ter hoogte van het huidige Broek De Naeyer stonden in verbinding met de Fabriekloop om slib te laten bezinken waarna het water vervolgens opnieuw in de Fabriekloop stroomde. De bekkens zelf zouden niet ontstaan zijn door uitgraving, maar door aanleggen van wallen op basis van slib en andere materialen. Sommige van deze putten zijn vandaag niet meer als waterplas waarneembaar. Verder ten noorden komt/kwam het water in drie wachtbekkens terecht van waaruit het bij laag tij in de Rupel werd/wordt geloosd.

Uittreksels van deze historische kaarten zijn opgenomen als bijlage 7.5.2.

De fabriek De Naeyer ging failliet in 1986 en werd overgenomen om een deel van de activiteiten verder te zetten. In 1990 werden een aantal gronden openbaar verkocht aan de provincie Antwerpen. Tot April 1998 loosde de papierfabriek ongezuiverd in de Fabriekloop. Daarna werd er een waterzuiveringsinstallatie gebouwd. De activiteiten van de papierfabriek zijn in 2000 gestopt.

De terreinen waar de exploitatie door De Naeyer plaatsvond (= terrein ten zuiden van de spoorlijn Mechelen - Sint-Niklaas) zijn ondertussen herontwikkeld. Oppervlaktewater dat hier historisch aanwezig was, is op heden niet terug te vinden. Er werden voor de afvoer van hemelwater van de hier gevestigde bedrijfsgebouwen andere nieuwe ondergrondse afvoerbuizen voorzien.

Het eerste stuk van de historisch vormgegeven Fabriekloop dat op vandaag nog aanwezig is in het landschap situeert zich stroomafwaarts van de voormalige site De Naeyer tussen de spoorlijn Mechelen-Sint-Niklaas en de Heindonksesteenweg.

Hier loopt eveneens, op korte afstand en parallel met de Fabriekloop, de Zwarte Beek. Voor zover

gekend werd en wordt geen connectie gemaakt tussen beide waterlopen. Historisch gezien liep de Zwarte Beek langsheen de site De Naeyer, maar hierop zou geen water geloosd zijn. Iets meer stroomopwaarts, ter hoogte van de locatie waar de Zwarte beek onder de spoorlijn Mechelen - Sint-Niklaas door gaat, is er een aftakking van de Zwarte Beek genaamd de Arkenbosloop die verder in oostelijke richting naar Blaasveldbroek loopt.

Vanaf de Heindonksesteenweg loopt de Fabriekloop op vandaag in een betonnen bedding tot aan het Broek De Naeyer. Parallel met de betonnen bedding van de Fabriekloop is ten westen ook een gracht aanwezig.

Het water van de Fabriekloop loopt vervolgens door het oostelijk deel van het Broek De Naeyer. Dit deel van het Broek De Naeyer fungeerde als bezinkingsbekkens voor de Fabriekloop. Toen de papierfabriek nog het afvalwater loosde in de Fabriekloop werd het water doelbewust door de bezinkingsbekkens gestuurd om papierpulp te laten bezinken en te verteren alvorens het in de Rupel kwam. Er zijn greppels gemaakt om het westelijke deel van het Broek De Naeyer voor een deel te ontwateren naar de Fabriekloop toe maar bij hoge waterstand kan er water uit de Fabriekloop in het westelijke deel van het Broek De Naeyer gestroomd zijn.

De Fabriekloop mondt in het noorden uit in de Rupel via een sluis (de dubbelsluis).

Broek De Naeyer is een typisch ‘recyclagegebied’. Het draagt de sporen van een onbegrensde menselijke activiteit: wat ooit begon met de ontginning van turf eindigde met de aanleg van een open riool en het storten van industriële afvalstoffen. In het gebied zijn stortplaatsen van industrieel afval en asbest aanwezig (beperkt onderzocht en aangetroffen).

2.4.1.2 Rioolwaterzuiveringsinstallatie (RWZI)

Halverwege het deel van de Fabriekloop met betonnen bedding bevindt zich aan de Stuyvenberglaan de RWZI Willebroek Blaasveld (zie bijlage 7.1.3). Volgens de informatie beschikbaar via Geopunt maakt de RWZI voor lozing geen gebruik van de Fabriekloop die langs het terrein van de RWZI loopt. Er is een aparte afvoer van lozingswater in noordelijke richting tot net vóór Broek De Naeyer waar het water volgens de gegevens van Geopunt wordt geloosd in de Geulloop, die wel in connectie staat met de Fabriekloop (zie lozingspunt aangeduid op bijlage 7.1.3).

2.4.1.3 Romboutsgronden

Net ten zuiden van Broek de Naeyer bevinden zich de Romboutsgronden, genoemd naar de voormalige exploitant Rombouts nv. Op basis van historische informatie was er destijds sprake van een lozingspunt op de Geulloop komende van de exploitant Rombouts.

Niet alleen het dossier De Naeyer maar ook de Romboutsgronden kunnen een invloed gehad hebben op de kwaliteit van de Fabriekloop. Er waren hier in het verleden aanwijzingen voor lozing van met olie verontreinigd water.

Gelinkt met de Romboutsgronden en nabij het Broek De Naeyer was ook sprake van een gipsstort en een monodeponie voor een arseenverontreiniging.

2.4.2 Historiek bodemdossiers

Een beknopte historiek en kernpunten van bodemonderzoeken uitgevoerd in het kader van het dossier ‘papierfabriek De Naeyer’ en ‘Romboutsgronden’ is weergegeven in de bijlage 7.5.3.

2.5 EERDER WATERBODEMONDERZOEK BINNEN BROEK DE NAEYER

Bij het benoemen van verschillende waterpartijen en/of zones wordt gebruikt gemaakt van de benaming zoals wordt gehanteerd in het ‘Uitgebreid bosbeheerplan 2016-2036’ opgesteld voor het provinciaal domein Broek De Naeyer (zie ook aanduiding op het plan in bijlage 7.1.4).

2.5.1 Indicatief onderzoek 2017-2018 (PIH)

Het meest recente onderzoek waarbij de waterbodem binnen het Broek De Naeyer werd onderzocht, werd uitgevoerd door het Provinciaal Instituut voor Hygiëne (PIH) in 2017-2018. Hierin werd de waterbodem van alle vijvers binnen het Broek bemonsterd door het nemen van 1 of 2 monsters per waterpartij alsook werd de waterbodem van de Fabriekloop op 2 locaties bemonsterd.

Het terrein is overeenkomstig het Gewestplan en/of het BPA 16 ‘Broek De Naeyer’ grotendeels gelegen in landschappelijk waardevol bosgebied (bestemmingstype I) en deels (deel van vijver 1 B) in groengebied voor vissport (bestemmingstype I).

De stalen werden geanalyseerd op zware metalen, polycyclische aromatische koolwaterstoffen (PAK), minerale olie, organochloorpesticiden (OCP), polychloorbifenvlen (PCB) en asbest. Door Sertius werden de resultaten hertoetst aan de huidige geldende normen (cf. normenkader in voege sinds 1 april 2019). De toetsingstabellen zijn opgenomen als bijlage 7.4.5A. Een bespreking van de resultaten wordt hierna gegeven.

1. INLEIDING

Op vraag van OVAM werd door Sertius nv (verder aangeduid als Sertius) een eerste screening uitgevoerd van de informatie die mbt grondverzet beschikbaar is voor de site van de voormalige Papierfabriek De Naeyer te Willebroek.

Bij de bodembeheersorganisaties Grondbank en Grondwijzer werd een overzicht opgevraagd (11/2021) en de betreffende dossiers en documenten werden ter inzage overgemaakt.

Na overleg tussen OVAM en de projectontwikkelaar Matexi werd bijkomende informatie aangeleverd door Matexi omtrent het uitgevoerde grondverzet bij de recente herontwikkeling van hun terreindelen.

Aandachtspunt:

De documenten die door bodembeheersorganisaties overgemaakt werden ter inzage zijn de conformverklaringen, gebruiksbrieven, grondtransportmeldingen (grondtransporttoelatingen), bodembeheerrapporten, ...

Uit overleg met de bodembeheerorganisatie Grondbank volgt dat de dossiers en documenten die betrekking hebben op gebruik als bodem of bouwkundige toepassing geen visuele weergave en geen concrete detailplannen bevatten van percelen of zones waar het effectieve gebruik of de toepassing betrekking op hebben. Uit de conformverklaringen, gebruiksbrieven, grondtransportmeldingen, bodembeheerrapporten, ... kan dus niet op detailniveau achterhaald worden waar exact de grond hergebruikt of toegepast is.

De technische verslagen zelf werden niet overgemaakt voor inzage gezien hierin ook niet af te leiden is wat er achteraf met de grond gebeurd is; in het technisch verslag wordt enkel aangegeven wat de kwaliteit is (vóór ontgraving) en of hergebruik binnen de kadastrale werkzone mogelijk is.

2. BESCHIKBARE GEGEVENS BODEMBEHEERORGANISATIES

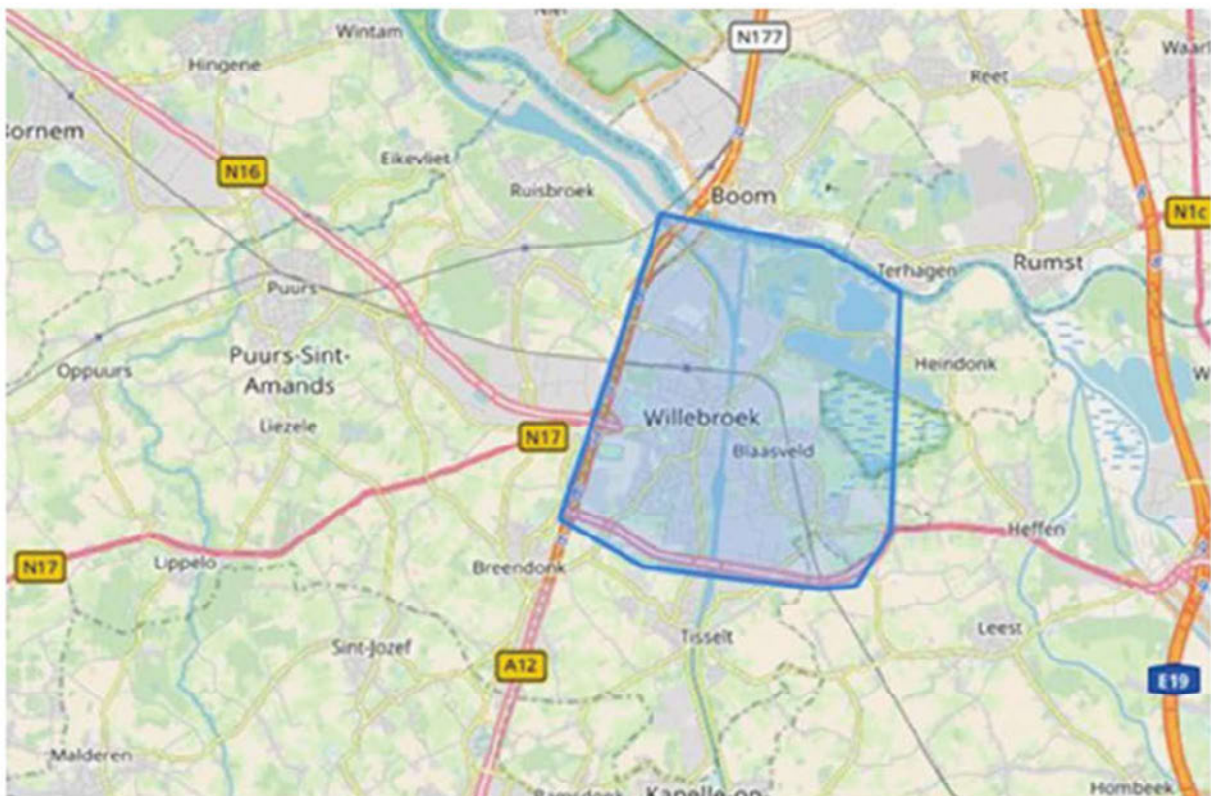

2.1. Grondbank

Door Grondbank werd in eerste instantie een lijst opgemaakt van alle beschikbare documenten die betrekking hebben op de zoekzone zoals in blauw aangeduid op Figuur 1. De zoekzone werd ruimer genomen dan de site van de voormalige Papierfabriek De Naeyer omdat niet alle documenten die opgenomen zijn in de databank van Grondbank eenduidig gerelateerd zijn aan een adres en/of huisnummer.

Deze uitgebreide lijst werd gescreend en gereduceerd tot de documenten die betrekking hebben op de woonzones F, J, H, K en O, het natuurgebied Broek De Naeyer (zone N) en de KMO-zone ten noorden van woonzone F (zie gereduceerde overzichtslijst in bijlage 1).

Voor de beoordeling van de documenten zoals opgelijst in bijlage 1 geldt dat:

- Documenten/dossiers die aangeduid zijn als 'Locatie Herkomst' betrekking hebben op gronden die uit de afgebakende zone afkomstig zijn (en die hergebruikt zijn binnen de afgebakende zone of afgevoerd zijn)
- Documenten/dossiers die aangeduid zijn als 'Locatie bestemming' betreft gronden die aangevoerd werden naar de afgebakende zone.

Figuur 1 – Aanduiding zoekzone Grondbank documenten mbt grondverzet

De samenvatting zoals opgenomen in paragraaf 3 is gebaseerd op de documenten opgelijst in bijlage 1.

2.2. Grondwijzer

2.2.1. AFVOER

Door Grondwijzer werden 10 technische verslagen conform verklaard die binnen de zone van de no regretmaatregelen te Willebroek gelegen zijn (zie aanduiding rode zone op Figuur 2 en oplistings in tabel 1) (afbakening zone NRM sinds medio 2021) waarvan 1 conformverklaring betrekking heeft op een dossier gelegen in de woonzone die in ontwikkeling is op de site Papierfabriek De Naeyer (zie aanduiding in zwart op Figuur 2).

Uit tabel 2 volgt dat er enkel voor conformverklaring 114891 grondverzettoelatingen/ bodembeheerrapporten werden aangevraagd. Dit is ook het enige dossier die betrekking heeft op de woonzone die in ontwikkeling is op de site Papierfabriek De Naeyer.

Voor de overige conformverklaringen werden bij Grondwijzer geen grondverzettoelatingen aangevraagd.

2.2.2. AANVOER

Er werden 22 grondverzettoelatingen afgeleverd voor aanvoer van grond naar de woonzone die in ontwikkeling is op de site Papierfabriek De Naeyer (zie oplistijng in tabel 2).

² De grondverzettoelatingen voor aanvoer naar de woonzone site Papierfabriek De Naeyer werden door Grondwijzer geselecteerd op straatnaam (selectie op Pulpstraat, Otto Intzeplein, Industriestraat, Fabrieksstraat, Gieterijstraat, Thomas Vinçottestraat, Alida Peetersplein, Brigandsiraat, Oostvaarddijk, Heindonkstraat, Louis de Naeyerkaai, Victor Dumonlaan, Stuyvenbergbaan, Heindonksesteenweg, Broekstraat, Houtberg, Kalkberg, Kebbinglei, Kanunnik Arthur Boonstraat, Dorpsstraat, Wouters-Lefebvreplein en Mechelsesteenweg (of N183)).

3. SYNTHESE INFORMATIE GRONDBANK

3.1. Afvoer of hergebruik

Grond afkomstig uit de afgebakende zone en die binnen de afgebakende zone hergebruikt is of die vanuit de afgebakende zone afgevoerd is naar andere locaties (in Vlaanderen):

- a. Grondbank Dossier R-00015256 verwijst naar wegenis- en rioleringswerken voor verkaveling Durabrik (periode 2008-2011) [REDACTED]
Volgens info [REDACTED] (ambtenaar gemeente Willebroek) maakt deze ontwikkeling van Durabrik geen deel uit van de site Papierfabriek De Naeyer; dit betreft een ontwikkeling [REDACTED] [REDACTED] Mail OVAM, [REDACTED] 09/12/2021).
- b. Bij infrastructuurwerken tbv woonverkaveling (periode 2016-2018) (aanleg wegenis, infrastructuur en openbaar domein site Papierfabriek De Naeyer) (in zone 1 en zone 4 op plan in bijlage 3)
 - i. Grond werd deels binnen de werf hergebruikt als BBG ('aanvullen sleuven onder verharding, ophoging terrein, aanvulling rioleringsleuven)
 - ii. Grond werd deels afgevoerd naar TOPs
- c. Bij de bouw van gebouwen K, L en M (periode 2019) (in zone 9 op plan in bijlage 3)
 - i. 8990 m³
 - ii. Afgevoerd naar Linkeroever/Oosterweel
 - iii. Voor infrastructuurwerken (gebruik BBG – aanleg landhoofden, wegenis in talud, geluidsberm) (eerst tussentijds gebruik op werf bestemming – nadien definitieve toepassing) (Aannemer Stadsbader)
 - iv. Gebouwen K, L en M zijn de herontwikkeling door Kanaelzicht/Odebrecht: gebouwen [REDACTED]
[REDACTED]
- d. Bij de bouw van woningen [REDACTED]
 - i. 1097 m³ (volgens GTT) (> 1200 m³ volgens BBR)
 - ii. Afgevoerd naar bergingsdepot (groeve – kleigroeve Berrenheibos) Tuinlei Schelle (opvulling ontginningsput)

3.2. Aanvoer

Grond aangevoerd naar de afgebakende zone vanuit andere locaties (in Vlaanderen):

- a. Meerdere GTT (grondtransporttoelatingen) en BBR (bodembeheerrapporten) mbt aanleggen van groenbuffer met beplanting/geluidsberm (periode 2013-2015)
 - i. Kwaliteit van de aangevoerde gronden voor groenbuffer/geluidsberm = BBG (bouwkundig bodemgebruik)
 - ii. die nadien *'afgedekt moet worden met 50 cm grondcode 211'*
 - iii. > 75000 m³
 - iv. Over de aanvoer van grond voor de eindafdek (50 cm grondcode 211) zijn geen gegevens in de documenten terug te vinden (niet duidelijk of dit ook aanvoer van extern is of afkomstig is van grondoverschotten op terrein zelf?)
 - Ifv site-onderzoek of onderzoek KMO-zone zal kwaliteit eindafdek bepaald moeten worden
- b. Bij infrastructuurwerken tbv woonverkeveling (periode 2016-2018) (in zone 1 en zone 4 op plan in bijlage 3)
 - i. Aanvoer van grond voor BBG ('aanvullen sleuven onder verharding')
- c. Meerdere GTT (grondtransporttoelatingen) en BBR (bodembeheerrapporten) (periode 2006-2007)
 - i. Terrein Alpreco [REDACTED] (KMO-zone ten N van zone F)
 - ii. Gebruik als bodem
 - iii. > 10000 m³
- d. Overige aanvoer van grond voor gebruik als bodem
 - i. 'Denaeyer Papier nv' – 3000 m³ (periode 2007) + 37121 m³ (periode 2008) + 6000 m³ (periode 2010)

Let op: er is enkel een grondtransporttoelating, geen bodembeheerrapport. Het is niet duidelijk of deze gronden aangevoerd werden en zo ja, of deze dan in zone F of in de KMO-zone ten N van zone F toegepast zijn (gezien de periode 2007-2010 is de kans wellicht groter dat die gronden toegepast zijn thv KMO-zone ten N van zone F)
 - ii. Cool Constructions (= voor Vaartland?) – 1000 m³ + 595 m³ + 400 m³ (periode 2017) voor aanvullingen funderingen en bouwputten na afbraak woningen

Voor de woonzone site Papierfabriek De Naeyer (zone F) kan uit de dossiers/documenten niet afgeleid worden dat gronden aangevoerd werden voor ophoging/aanleg van de tuinen. Evenmin kan afgeleid worden of en welke gronden van op de site zelf hiervoor gebruikt werden.

4. SYNTHESE INFORMATIE GRONDWIJZER

4.1. Afvoer of hergebruik

Grond afkomstig uit de afgebakende zone en die binnen de afgebakende zone hergebruikt is of die vanuit de afgebakende zone afgevoerd is naar andere locaties (in Vlaanderen):

- a. Afkomstig van bouwzone [REDACTED] (werf Deneve Construct)
 - i. 7007 m³ (volgens BBR) (04+05/2021)
 - ii. Afgevoerd naar [REDACTED] Schelle z/n (Ceulemans/definitieve opslagplaats/ [REDACTED])

4.2. Aanvoer

Grond aangevoerd naar de afgebakende zone vanuit andere locaties (in Vlaanderen):

- a. Meerdere BBR (bodembeheerrapporten) mbt aanleggen van groenbuffer met beplanting (periode 2012-2014)
 - i. Kwaliteit van de aangevoerde gronden voor groenbuffer = BBG (bouwkundig bodemgebruik)
 - ii. 7621 m³
- b. Meerdere GTT (grondtransporttoelatingen) en BBR (bodembeheerrapporten) mbt aanleggen taludlichaam (periode 2013-2014)
 - i. Kwaliteit van de aangevoerde gronden voor taludlichaam = BBG (bouwkundig bodemgebruik)
 - ii. 2772 m³ (cfr. GTT) + 7049 m³ (cfr BBR)

De groenbuffer en taludlichaam onder puntje a. en b. betreffen wellicht ook beide de berm die de woonzone afschermt van de KMO-zone; het betreft allemaal aanvoer van grond voor bouwkundig bodemgebruik (die dus als kern in de berm toegepast konden worden).

Over de aanvoer van grond voor de eindafdek (50 cm grondcode 211) zijn niet direct gegevens in de documenten terug te vinden (niet duidelijk of dit ook aanvoer van extern is of afkomstig is van grondoverschotten op het terrein zelf?)

- c. Overige BBR (bodembeheerrapporten) (periode 2015)
 - i. Voormalig perceel 467 P3 (wellicht toegepast in deel KMO-zone ten N van zone F)
 - ii. Bouwkundig bodemgebruik (onderfundering gebouwen en wegenis)
 - iii. 1704 m³

5. AANVULLENDE INFORMATIE

Tijdens het overleg dd. 09/12/2021 van de stuurgroep in het kader van brownfieldconvenant BFC 4 voor de herontwikkeling van de site Papierfabriek Denaeyer werden m.b.t. grondverzet onderstaande verduidelijkingen gegeven aan OVAM (cfr. mail OVAM, [REDACTED] 09/12/2021). Op de plannen in bijlage 2 en 3 zijn de partijen betrokken bij de herontwikkeling en de ontwikkelingszones aangeduid.

a. Groenbuffer/geluidsberm

- Eigenaar is WDP, maar de aanleg van de berm is uitgevoerd vóór WDP eigenaar is geworden. [REDACTED] (Vaartland NV) vermoed dat dit nog door de vereffenaars van Denaeyer Papier NV is gebeurd.
- Op het terrein ('achteraan' op het terrein) is teelaarde verzameld; deze teelaarde kwam o.a. ook uit de zone waar het bosje zich bevond. Vermoedelijk is die teelaarde gebruikt op de berm als afdeklaag.

- b. De aanvoer van gronden cfr. 3.2.d.i betreft aanvoer op het noordelijke deel van de site thv de KMO-zone. Deze gronden werden gebruikt voor het opvullen van een visvijver; cfr. [REDACTED] ambtenaar gemeente Willebroek was deze visvijver gelegen in het rode kader op de luchtfoto in Figuur 3 (de zone die deel uitmaakt van BFC 4 is aangeduid met een groen kader).

Figuur 3 – Aanduiding zone opvulling vijver (rood kader) (zone die deel uitmaakt van BFC 4 is aangeduid met groen kader)

6. INFORMATIE MATEXI

Door Matexi [REDACTED] en zijn bodemdeskundige (Universoil, Fleur Verfaillie) werd bijkomende informatie overgemaakt omtrent het uitgevoerde grondverzet en de aanwezige grondhopen:

- Overschot van grond van de bouwwerken van loten 65-74 (rode aanduiding op Figuur 4 en op plan in bijlage 4) werd tijdelijk gestockeerd op loten 59-64 en nadien verplaatst naar de tuinen van loten 1-9 (gele aanduiding op Figuur 4 en op plan in bijlage 4)
- Grond afkomstig van loten 53-64 werd tijdens de bouwwerken verplaatst naar de tuinen van loten 1-9
- Grond afkomstig van loten 22-43 (zie aanduiding op Figuur 4 en op plan in bijlage 4) werd verplaatst naar de tuinen van loten 1-9

Bijgevolg waren twee hopen van ca. 1.800 m³ gestockeerd in tuinen loten 1-9. Deze hopen werden onderzocht ikv opmaak TV (Talboom, 01/12/2020) (zie zoneringsplan met aanduiding Hoop 1³ en Hoop 2⁴ op Figuur 5). Beide hopen werden na opmaak en conformverklaring van het TV afgezeefd.

Hoop 1 werd vervolgens verplaatst naar loten B1-12 (groene pijl op Figuur 4 en op plan in bijlage 4) (= Hoop 1, 1500 à 2000 m³ op Figuur 6); Hoop 2 werd deels teruggelegd in de tuinen van loten 53-64 (blauwe pijl op Figuur 4 en op plan in bijlage 4) (= Hoop 3, ca. 1000 m³ op Figuur 6) en deels in de tuinen van loten 10-20 (blauwe pijl op Figuur 4 en op plan in bijlage 4) (= Hoop 2, 1500 à 2000 m³ op Figuur 6).

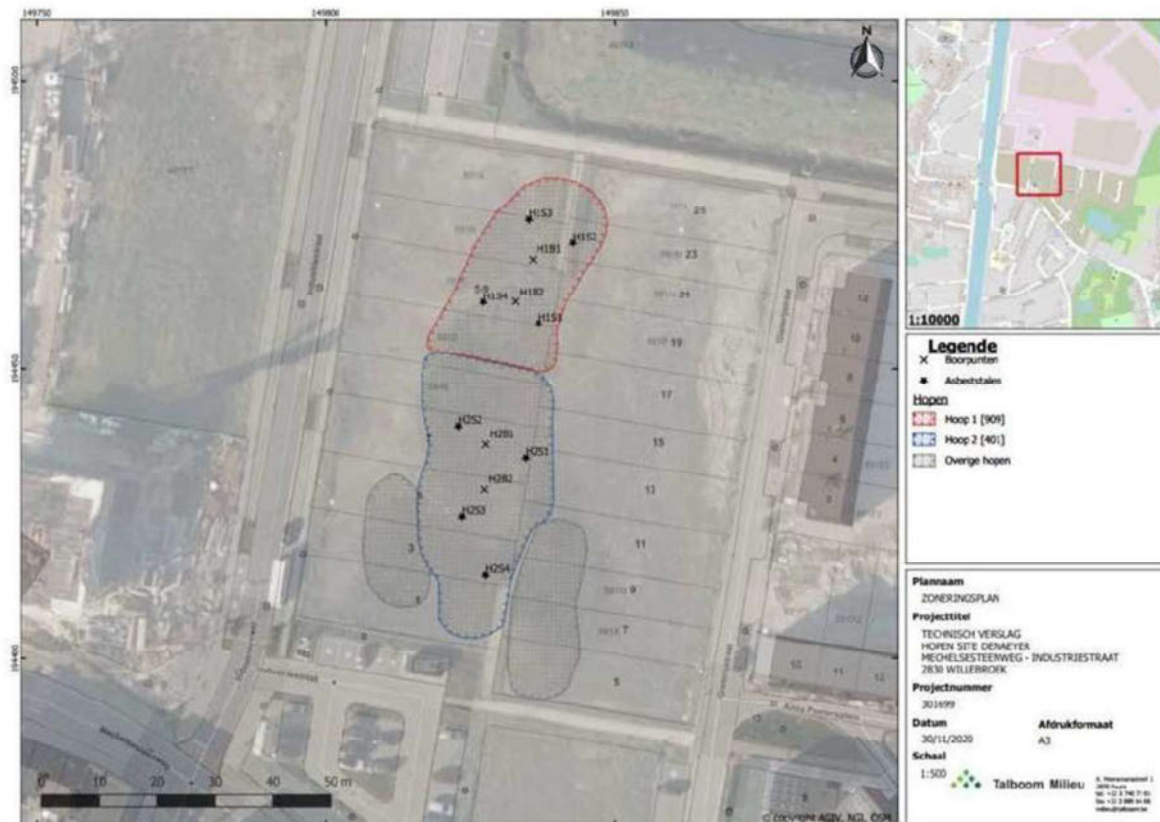

Figuur 4 – Schematische aanduiding grondverzet Matexi tijdens bouwwerken (plan ook integraal opgenomen als bijlage 4)

³ Hoop 1: initieel grondverzetscode 909 omwille van asbest en koper; na afzeven werd bijkomend asbestonderzoek uitgevoerd met aanpassing grondverzetscode van 909 naar 901 (aangepaste conformverklaring dd. 02.06.2021); obv bijkomende analyses zware metalen en PAK werd grondverzetscode nog bijgesteld van 901 naar 301 (interpretatie excl. PFAS-analyses)

⁴ Hoop 2: Grondverzetscode 401 (interpretatie excl. PFAS-analyses)

In loten 65-74 (rode aanduiding op Figuur 4 en op plan in bijlage 4) werd in de tuinen extra grond geplaatst, namelijk teelaarde van externe afkomst (tot ca. 30cm).

In loten 22-43 is grond gebruikt die werd gestockeerd op loten 53-64 en die gemengd werd met overschot van teelaarde. Er werd namelijk teelaarde gestockeerd op de gronden van loten 53-64.

Infiltration rate in the vadose zone, unpaved area (m/y)	2.650E-01
Infiltration rate in the vadose zone, paved area (m/y)	

3.6 Permeation through supply water pipe

Supply water parameters	Justification
-------------------------	---------------

Depth of water pipe below soil surface (m)	8.000E-01	
Pipe length through contaminated area (m)	5.000E+01	
Supply-water pipe material	PE	
Internal radius of the supply-water pipe (m)	9.800E-03	
Thickness of supply-water pipe wall (m)	2.700E-03	
Daily supply-water use (m ³ /d)	5.000E-01	

3.7 Outdoor air calculations

Outdoor air parameters		Justification
Length of the site in dominant wind direction (m)	5.000E+01	
Terrain roughness length (m)	6.000E-01	
Height (m)	1.000E+01	
Wind velocity at height 10.000m (m/h)	2.880E+05	
PM10 concentration resulting from soil (µg/m ³)	5.000E+00	
Enrichment factor soil - soil-derived PM10	2.000E+00	

3.8 Vapour intrusion parameters

Building parameters		Justification
Building type	Slab-on-grade	[null]
State of the floor	Gaps and holes	
Volume of indoor space (m ³)	1.500E+02	
Depth of concrete slab below soil surface (m)	1.000E-01	
Thickness of the slab (m)	1.000E-01	
Surface area of the slab (m ²)	5.000E+01	
Basic air exchange rate for the indoor space (1/d)	2.400E+01	
Fraction of openings in the slab (m ² /m ²)	1.000E-05	
Number of openings per floor area (1/m ²)	2.000E-01	
Pressure difference between indoor space and soil (Pa)	1.000E+00	

Buffer space	1.000E-01	["Set by system django"]

3.9 Indoor dust parameters

Indoor dust		Justification
Fraction of soil in indoor settled dust (-)	5.000E-01	
Enrichment factor soil to indoor settled dust (-)	1.500E+00	
Ratio of PM10 concentration indoor/outdoor (-)	1.000E+00	

3.10 Bathroom parameters

Bathroom		Justification
Volume of the bathroom (m ³)	1.500E+01	
Volume of the shower stall (m ³)	2.000E+00	
Ventilation rate in the bathroom (1/h)	3.300E+00	
Water use during showering (m ³ /h)	5.000E-01
